## **CHAPTER 1 The importance of water electrolysis for our future energy system ..... 1**

Franz Lehner, David Hart

<b>1.1</b>	Introduction.....	1
1.1.1	Chapter structure.....	1
1.1.2	Hydrogen and water electrolysis.....	2
1.1.3	Hydrogen production and use today .....	2
1.1.4	Does hydrogen have a color?.....	3
<b>1.2</b>	Motivation and key drivers for hydrogen in the future energy system .....	5
1.2.1	Historic interest in hydrogen: defossilization .....	5
1.2.2	The contemporary drive for hydrogen: decarbonization .....	6
1.2.3	Net zero versus defossilization versus 100% renewable energy supply.....	9
1.2.4	Regional drivers for hydrogen .....	10
<b>1.3</b>	Hydrogen in global energy future scenarios .....	11
1.3.1	Published energy scenarios with detail on hydrogen.....	11
1.3.2	Different net-zero strategies and what they mean for hydrogen.....	14
<b>1.4</b>	Water electrolysis in a net-zero future .....	19
1.4.1	Hydrogen by production pathway in net-zero scenarios .....	19
1.4.2	Required water electrolyzer capacity in net-zero scenarios.....	20
1.4.3	Are there limitations to solar and wind deployment?.....	21
1.4.4	Green versus blue hydrogen—renewable versus fossil energy .....	24
<b>1.5</b>	Summary and outlook to 2030.....	25
1.5.1	Unprecedented drive for water electrolysis as a transition enabler .....	25
1.5.2	Best use of green hydrogen from early water electrolyzer projects .....	26
1.5.3	Deployment of water electrolysis in the 2030 timeframe.....	27
1.5.4	Green hydrogen as an accelerator of the energy transition.....	28
	Abbreviations, terminology, units and conversions .....	29
	References.....	31

## **CHAPTER 2 Fundamentals of water electrolysis.....37**

Pierre Millet

<b>2.1</b>	Introduction.....	37
2.1.1	Brief historical perspective .....	37
2.1.2	The machinery .....	38

<b>2.2</b>	The water electrolysis cell .....	39
2.2.1	Cell design .....	39
2.2.2	Role of electrolyte pH.....	40
2.2.3	Different electrolysis cells .....	41
<b>2.3</b>	Thermodynamics .....	43
2.3.1	Thermochemistry – ideality .....	43
2.3.2	Thermochemistry – non-ideality.....	47
2.3.3	Electrochemical thermodynamics.....	48
<b>2.4</b>	Non-equilibrium thermodynamics.....	49
2.4.1	Review of dissipation sources.....	49
2.4.2	The hydrogen evolution reaction (HER).....	50
2.4.3	The oxygen evolution reaction (OER).....	52
2.4.4	I–V curves.....	53
<b>2.5</b>	Cell efficiency .....	55
2.5.1	Energy efficiency .....	56
2.5.2	Process energy efficiency.....	57
2.5.3	Coulombic efficiency.....	57
<b>2.6</b>	Conclusions.....	58
	Glossary .....	58
	Abbreviations.....	58
	Latin symbols.....	59
	Greek symbols .....	60
	References.....	60
<b>CHAPTER 3</b>	<b>Thermochemical hydrogen processes .....</b>	<b>63</b>
	Maximilian B. Gorenssek, Claudio Corgnale, John A. Staser, John W. Weidner	
<b>3.1</b>	Introduction.....	63
<b>3.2</b>	Metal oxide water splitting cycles .....	64
3.2.1	Generic metal-oxide cycle .....	64
3.2.2	Cerium oxide cycle .....	65
3.2.3	Nonstoichiometric perovskite-based solar thermochemical cycles .....	68
<b>3.3</b>	Copper–chlorine process .....	69
<b>3.4</b>	Sulfur-based process .....	72
3.4.1	Sulfur–iodine cycle.....	72
3.4.2	Hybrid sulfur cycle .....	74
<b>3.5</b>	Conclusions and outlook.....	77
	References.....	78

## **CHAPTER 4 The history of water electrolysis from its beginnings to the present..... 83**

Tom Smolinka, Henry Bergmann, Juergen Garche, Mihails Kusnezoff

<b>4.1</b>	Introduction.....	83
<b>4.2</b>	First developments.....	85
4.2.1	Electrochemical fundamentals.....	89
4.2.2	Direct current generators.....	89
4.2.3	Drive principles.....	90
<b>4.3</b>	Preindustrial time up to about 1900.....	91
4.3.1	Water electrolysis.....	93
4.3.2	Chlor-alkali electrolysis.....	100
<b>4.4</b>	Alkaline water electrolysis in the 20th century.....	105
4.4.1	Industrial commercialization until 1950.....	105
4.4.2	Large industrial deployment until 1980.....	112
4.4.3	Advanced alkaline water electrolysis.....	117
<b>4.5</b>	History of polymer electrolyte membrane water electrolysis.....	126
4.5.1	Military and space application as early driver.....	126
4.5.2	Beyond niche applications.....	130
<b>4.6</b>	History of high-temperature steam electrolysis.....	133
4.6.1	Pioneering high-temperature fuel cells.....	134
4.6.2	Progress in solid oxide electrolysis cells.....	140
<b>4.7</b>	Recent past with focus on new markets for renewables energies.....	143
4.7.1	Early German research projects since 1980.....	144
4.7.2	Selected international research projects until the early 2000s.....	150
	Abbreviations.....	152
	References.....	153

## **CHAPTER 5 Alkaline electrolysis—status and prospects..... 165**

Asif S. Ansar, Aldo S. Gago, Fatemeh Razmjooei, Regine Reißner, Ziqi Xu, Kaspar Andreas Friedrich

<b>5.1</b>	Brief history of water electrolysis.....	165
<b>5.2</b>	Physical and chemical principles of electrolysis.....	167
5.2.1	Main technologies of water electrolysis.....	167
5.2.2	Efficiency of an electrolyzer.....	167
<b>5.3</b>	Principle of operation of an alkaline electrolyzer.....	168
<b>5.4</b>	Technical concepts of electrolysis—status and prospects.....	170
5.4.1	Key performance parameters.....	170
5.4.2	Technical concepts of alkaline electrolysis—past and today.....	172

<b>5.5</b>	Materials .....	174
5.5.1	Separators .....	175
5.5.2	Electrodes .....	177
5.5.3	Operating conditions.....	181
<b>5.6</b>	Degradation effects in alkaline electrolyzers.....	183
<b>5.7</b>	Anion exchange membrane water electrolysis .....	185
<b>5.8</b>	Description of technical plants .....	188
5.8.1	Components of an alkaline electrolysis plant .....	188
<b>5.9</b>	Alkaline electrolysis—future prospects.....	190
	Abbreviations.....	192
	References.....	193
 <b>CHAPTER 6 PEM water electrolysis .....</b>		<b>199</b>
	Magnus S. Thomassen, Anita H. Reksten, Alejandro O. Barnett, Thulile Khoza, Kathy Ayers	
<b>6.1</b>	General principle and cell layout.....	200
6.1.1	Introduction.....	200
6.1.2	Cell layout.....	201
<b>6.2</b>	Cell and stack materials.....	202
6.2.1	Electrocatalyst for oxygen evolution reaction and hydrogen evolution reaction.....	202
6.2.2	Membrane.....	203
6.2.3	Bipolar plates.....	204
6.2.4	Current collectors.....	205
<b>6.3</b>	Performance on cell and system level.....	206
<b>6.4</b>	Degradation mechanisms and lifetime.....	207
6.4.1	Bipolar plates and current collectors .....	208
6.4.2	Catalysts and electrodes.....	209
<b>6.5</b>	Electrolyte.....	209
<b>6.6</b>	System aspects and operational experience .....	210
<b>6.7</b>	System configuration and design .....	210
<b>6.8</b>	Modeling of polymer electrolyte membrane or proton exchange membrane electrolyzers.....	210
<b>6.9</b>	Material level .....	212
6.9.1	Modeling of the oxygen evolution reaction mechanism.....	212
6.9.2	Conductivity of membrane .....	212
<b>6.10</b>	Cell level.....	213
6.10.1	Semiempirical modeling .....	213
6.10.2	Mechanistic multiphase modeling .....	214

<b>6.11</b>	Stack and system level.....	214
6.11.1	Stack modeling .....	214
6.11.2	System modeling combined with renewable intermittent energy sources .....	215
<b>6.12</b>	Cost reduction potential of polymer electrolyte membrane or proton exchange membrane electrolyzers.....	216
6.12.1	Polymer electrolyte membrane or proton exchange membrane electrolyzer cost development.....	216
<b>6.13</b>	Cost breakdown .....	217
<b>6.14</b>	Main actors and highlights of recent years.....	218
<b>6.15</b>	Outlook and new concepts.....	219
	References.....	221

## **CHAPTER 7 High-temperature steam electrolysis .....229**

Annabelle Brisse, Josef Schefold, Aline Leon

<b>7.1</b>	Introduction and general principle.....	230
<b>7.2</b>	Architecture of solid oxide cells .....	231
<b>7.3</b>	Cell materials.....	232
7.3.1	Electrolyte.....	232
7.3.2	Hydrogen electrode.....	233
7.3.3	Oxygen electrode .....	233
7.3.4	Manufacturing.....	234
<b>7.4</b>	Stack components and designs .....	234
7.4.1	Interconnect materials and coatings.....	235
7.4.2	Sealing materials.....	235
<b>7.5</b>	Cell performance .....	236
7.5.1	Introduction: impact of SOFC/SOEC reversibility & limits of reversibility .....	236
7.5.2	Testing set-up.....	238
7.5.3	Performance.....	239
7.5.4	Durability .....	241
<b>7.6</b>	Stack performance .....	250
7.6.1	Introduction.....	250
7.6.2	Testing set-up.....	250
7.6.3	Performance and durability.....	251
7.6.4	Cycling modes and pressurized operation .....	254
<b>7.7</b>	Structural analysis of cells and stacks .....	256
7.7.1	Classical characterization techniques .....	257
7.7.2	Advanced imaging with synchrotron radiation.....	259

<b>7.8</b>	High temperature steam electrolyzer system.....	265
7.8.1	Key parameters indicators.....	265
7.8.2	Balance of plant and system design.....	266
<b>7.9</b>	From cell to system cost analysis.....	267
<b>7.10</b>	Summary and outlook on future development.....	270
	Abbreviations.....	270
	References.....	272

**CHAPTER 8 Chlor-alkali electrolysis .....281**

Hiroshi Ito, Akiyoshi Manabe

<b>8.1</b>	Introduction.....	281
<b>8.2</b>	Brief history of the chlor-alkali industry.....	282
<b>8.3</b>	Overview of chlor-alkali technologies.....	283
8.3.1	Diaphragm cell.....	283
8.3.2	Mercury cell.....	285
8.3.3	Membrane cell.....	286
<b>8.4</b>	Materials and electrochemistry of a membrane cell.....	287
8.4.1	Membranes.....	287
8.4.2	Anodes.....	288
8.4.3	Cathodes.....	290
8.4.4	Cell design and operation.....	291
<b>8.5</b>	System configuration of membrane cell.....	292
8.5.1	Overview of system configuration.....	292
8.5.2	Rectifying.....	293
8.5.3	Brine processing.....	293
8.5.4	Chlorine processing.....	294
8.5.5	Caustic soda processing.....	294
8.5.6	Hydrogen processing.....	294
<b>8.6</b>	Overview of the chlor-alkali industry with membrane cells.....	295
8.6.1	Main players.....	295
8.6.2	Task analysis.....	295
<b>8.7</b>	Future outlook and a new cathode concept.....	299
	Acknowledgments.....	302
	References.....	303

**CHAPTER 9 Seawater electrolysis .....305**

Youri Gendel, Gidon Amikam, Paz Nativ

<b>9.1</b>	Introduction.....	305
9.1.1	Hydrogen economy and seawater electrolysis.....	305
9.1.2	Thermodynamics of water electrolysis.....	307

9.1.3	State-of-the-art water electrolysis techniques.....	308
9.1.4	Water quality requirements for water electrolysis .....	309
<b>9.2</b>	Seawater electrolysis.....	310
9.2.1	Seawater composition .....	310
9.2.2	Chlorine evolution reaction in seawater electrolysis .....	311
<b>9.3</b>	Chlorine-free seawater electrolysis for hydrogen production.....	314
9.3.1	Seawater electrolysis at very low current density .....	314
9.3.2	Implementation of special catalysts to prevent Cl <sub>2</sub> production in seawater electrolysis .....	315
9.3.3	Membrane-assisted chlorine-free seawater electrolysis .....	316
9.3.4	Introduction of elemental sulfur into seawater to avoid Cl <sub>2</sub> evolution reaction .....	316
9.3.5	Alkaline seawater electrolysis .....	317
<b>9.4</b>	Summary.....	323
	References.....	323

## **CHAPTER 10 Economic considerations for hydrogen production with a focus on polymer electrolyte membrane electrolysis .....327**

Alex Badgett, Mark Ruth, Bryan Pivovar

<b>10.1</b>	Introduction .....	328
<b>10.2</b>	Background.....	330
10.2.1	Electrolyzer types .....	330
<b>10.3</b>	Hydrogen markets.....	333
<b>10.4</b>	Hydrogen production cost economic considerations.....	335
10.4.1	Current electrolysis cost projections.....	336
10.4.2	Estimating the economics of hydrogen.....	337
<b>10.5</b>	Basic hydrogen economics (100 level).....	338
10.5.1	Operations and maintenance costs.....	338
10.5.2	Electricity costs.....	338
10.5.3	Capacity factor.....	338
10.5.4	Efficiency .....	339
10.5.5	Capital costs.....	339
10.5.6	Case studies .....	339
<b>10.6</b>	Hydrogen economics (300 level).....	344
10.6.1	Electrolyzer capital costs .....	344
10.6.2	Operating lifetime.....	346
10.6.3	Fixed operating and maintenance costs .....	346
10.6.4	Electricity prices and capacity factor.....	346

<b>10.7</b>	Advanced hydrogen economics (500 level).....	352
10.7.1	Operating strategy and potential impacts on durability .....	352
10.7.2	Sensitivity analysis .....	356
10.7.3	Implications for the electric power sector.....	358
<b>10.8</b>	Assumptions and knowledge gaps.....	358
<b>10.9</b>	Summary.....	358
	Funding sources .....	361
	Acknowledgments .....	361
	Conflict of interest statement .....	361
	References.....	361

**CHAPTER 11 Regenerative fuel cells .....365**

Juergen Garche, Tom Smolinka, Maria Assunta Navarra, Stefania Panero,  
Bruno Scrosati

<b>11.1</b>	Introduction .....	365
11.1.1	General principles.....	365
11.1.2	Unitized and discrete stack configurations .....	366
11.1.3	Types of regenerative fuel cell.....	368
<b>11.2</b>	Regenerative fuel cells based on proton exchange membranes technology .....	370
11.2.1	Cell materials and components.....	370
11.2.2	Main system components .....	375
11.2.3	Technical parameters .....	381
11.2.4	Developers of proton exchange membranes- unitized regenerative fuel cell systems.....	388
<b>11.3</b>	Other unitized regenerative fuel cell systems.....	391
11.3.1	Alkaline unitized regenerative fuel cell systems .....	391
11.3.2	Solid oxide unitized regenerative fuel cell systems.....	391
11.3.3	Unitized regenerative fuel cells with other redox pairs .....	393
<b>11.4</b>	Applications.....	394
11.4.1	General.....	394
11.4.2	Military and space applications .....	395
11.4.3	Terrestrial energy storage.....	396
<b>11.5</b>	Outline .....	399
	Abbreviations.....	399
	References.....	400

**CHAPTER 12 New electrolyzer principles: decoupled water splitting.....407**

Avigail Landman, Avner Rothschild, Gideon S. Grader

<b>12.1</b>	Introductions.....	407
-------------	--------------------	-----

<b>12.2</b>	Electrolytic schemes for decoupled water splitting.....	409
12.2.1	Electrolytic water splitting with soluble redox mediators.....	410
12.2.2	Electrolytic water splitting with solid auxiliary redox electrodes.....	418
<b>12.3</b>	Electrochemical–chemical cycles for decoupled water splitting.....	424
12.3.1	Electrochemical—chemical water splitting with soluble redox couples....	425
12.3.2	Electrochemical—chemical water splitting with solid redox electrodes....	431
<b>12.4</b>	Decoupled photoelectrochemical and photocatalytic water splitting.....	443
<b>12.5</b>	Summary.....	447
	Acknowledgment.....	449
	Competing interests.....	450
	References.....	450
<b>CHAPTER 13</b>	<b>Hydrogen storage.....</b>	<b>455</b>
	Henrietta W. Langmi, Nicolaas Engelbrecht, Phillimon M. Modisha, Dmitri Bessarabov	
<b>13.1</b>	Introduction.....	455
<b>13.2</b>	Physical storage.....	456
13.2.1	Compressed hydrogen storage.....	456
13.2.2	Cryogenic hydrogen storage.....	457
13.2.3	Cryo-compressed hydrogen storage.....	458
<b>13.3</b>	Adsorption storage.....	460
13.3.1	Metal–organic frameworks.....	460
13.3.2	Carbon-based materials.....	461
13.3.3	Porous organic polymers.....	462
<b>13.4</b>	Chemical hydrogen storage.....	463
13.4.1	Metal hydrides.....	463
13.4.2	Liquid organic hydrogen carriers.....	464
13.4.3	Ammonia.....	469
13.4.4	Formic acid.....	470
13.4.5	Methanol.....	471
<b>13.5</b>	Comparison of different storage technologies.....	472
<b>13.6</b>	Large-scale and underground hydrogen storage.....	473
<b>13.7</b>	Storage for mobile applications.....	474
<b>13.8</b>	Summary.....	477
<b>13.9</b>	Suggestions for further reading.....	479
	Abbreviations.....	480
	References.....	481
	Index.....	487
