ATC Projects and Report Information

ATC conducts applied research and technology transfer projects for which a consensus of engineering opinion is necessary or beneficial. ATC's primary audience includes engineering design professionals, federal, state, and local government entities, and other stakeholders in the global hazard mitigation community. In its nearly 50-year history, ATC has conducted more than 150 projects and published more than 300 major reports and publications.

ATC reports have identified and encouraged needed structural engineering research at the national level, contributed to the development and evolution of building codes and standards, and served to define seismic and other engineering design practice in the United States and the world. Because ATC products are consensus-based and non-proprietary, they are immediately accepted by the profession and hold lasting value to engineering practitioners. Although technology continues to evolve, many older reports remain useful as a historical reference or as a guide for current engineering practice.

A complete listing of ATC Projects and Report Information is available at www.ATCouncil.org.
