Preface

These six volumes (LNCS 13377–13382) consist of the peer-reviewed papers from the workshops at the 22nd International Conference on Computational Science and Its Applications (ICCSA 2022), which took place during July 4–7, 2022. The peer-reviewed papers of the main conference tracks are published in a separate set consisting of two volumes (LNCS 13375–13376).

This year, we again decided to organize a hybrid conference, with some of the delegates attending in person and others taking part online. Despite the enormous benefits achieved by the intensive vaccination campaigns in many countries, at the crucial moment of organizing the event, there was no certainty about the evolution of COVID-19. Fortunately, more and more researchers were able to attend the event in person, foreshadowing a slow but gradual exit from the pandemic and the limitations that have weighed so heavily on the lives of all citizens over the past three years.

ICCSA 2022 was another successful event in the International Conference on Computational Science and Its Applications (ICCSA) series. Last year, the conference was held as a hybrid event in Cagliari, Italy, and in 2020 it was organized as virtual event, whilst earlier editions took place in Saint Petersburg, Russia (2019), Melbourne, Australia (2018), Trieste, Italy (2017), Beijing, China (2016), Banff, Canada (2015), Guimaraes, Portugal (2014), Ho Chi Minh City, Vietnam (2013), Salvador, Brazil (2012), Santander, Spain (2011), Fukuoka, Japan (2010), Suwon, South Korea (2009), Perugia, Italy (2008), Kuala Lumpur, Malaysia (2007), Glasgow, UK (2006), Singapore (2005), Assisi, Italy (2004), Montreal, Canada (2003), and (as ICCS) Amsterdam, The Netherlands (2002) and San Francisco, USA (2001).

Computational science is the main pillar of most of the present research, and industrial and commercial applications, and plays a unique role in exploiting ICT innovative technologies. The ICCSA conference series provides a venue to researchers and industry practitioners to discuss new ideas, to share complex problems and their solutions, and to shape new trends in computational science.

Apart from the 52 workshops, ICCSA 2022 also included six main tracks on topics ranging from computational science technologies and application in many fields to specific areas of computational sciences, such as software engineering, security, machine learning and artificial intelligence, and blockchain technologies. For the 52 workshops we have accepted 285 papers. For the main conference tracks we accepted 57 papers and 24 short papers out of 279 submissions (an acceptance rate of 29%). We would like to express our appreciation to the Workshops chairs and co-chairs for their hard work and dedication.

The success of the ICCSA conference series in general, and of ICCSA 2022 in particular, vitally depends on the support of many people: authors, presenters, participants, keynote speakers, workshop chairs, session chairs, organizing committee members, student volunteers, Program Committee members, advisory committee

members, international liaison chairs, reviewers, and others in various roles. We take this opportunity to wholeheartedly thank them all.

We also wish to thank our publisher, Springer, for their acceptance to publish the proceedings, for sponsoring some of the best papers awards, and for their kind assistance and cooperation during the editing process.

We cordially invite you to visit the ICCSA website <https://iccsa.org> where you can find all the relevant information about this interesting and exciting event.

July 2022

Welcome Message from Organizers

The ICCSA 2021 conference in the Mediterranean city of Cagliari provided us with inspiration to offer the ICCSA 2022 conference in the Mediterranean city of Málaga, Spain. The additional considerations due to the COVID-19 pandemic, which necessitated a hybrid conference, also stimulated the idea to use the School of Informatics of the University of Málaga. It has an open structure where we could take lunch and coffee outdoors and the lecture halls have open windows on two sides providing optimal conditions for meeting more safely.

The school is connected to the center of the old town via a metro system, for which we offered cards to the participants. This provided the opportunity to stay in lodgings in the old town close to the beach because, at the end of the day, that is the place to be to exchange ideas with your fellow scientists. The social program allowed us to enjoy the history of Málaga from its founding by the Phoenicians...

In order to provoke as much scientific interaction as possible we organized online sessions that could easily be followed by all participants from their own devices. We tried to ensure that participants from Asia could participate in morning sessions and those from the Americas in evening sessions. On-site sessions could be followed and debated on-site and discussed online using a chat system. To realize this, we relied on the developed technological infrastructure based on open source software, with the addition of streaming channels on YouTube. The implementation of the software infrastructure and the technical coordination of the volunteers were carried out by Damiano Perri and Marco Simonetti. Nine student volunteers from the universities of Málaga, Minho, Almeria, and Helsinki provided technical support and ensured smooth interaction during the conference.

A big thank you goes to all of the participants willing to exchange their ideas during their daytime. Participants of ICCSA 2022 came from 58 countries scattered over many time zones of the globe. Very interesting keynote talks were provided by well-known international scientists who provided us with more ideas to reflect upon, and we are grateful for their insights.

Eligius M. T. Hendrix

Organization

ICCSA 2022 was organized by the University of Malaga (Spain), the University of Perugia (Italy), the University of Cagliari (Italy), the University of Basilicata (Italy), Monash University (Australia), Kyushu Sangyo University (Japan), and the University of Minho, (Portugal).

Honorary General Chairs

Norio Shiratori	Chuo University, Japan
Kenneth C. J. Tan	Sardina Systems, UK

General Chairs

Oswaldo Gervasi	University of Perugia, Italy
Eligius Hendrix	University of Malaga, Italy
Bernady O. Apduhan	Kyushu Sangyo University, Japan

Program Committee Chairs

Beniamino Murgante	University of Basilicata, Italy
Inmaculada Garcia Fernandez	University of Malaga, Spain
Ana Maria A. C. Rocha	University of Minho, Portugal
David Taniar	Monash University, Australia

International Advisory Committee

Jemal Abawajy	Deakin University, Australia
Dharma P. Agarwal	University of Cincinnati, USA
Rajkumar Buyya	Melbourne University, Australia
Claudia Bauzer Medeiros	University of Campinas, Brazil
Manfred M. Fisher	Vienna University of Economics and Business, Austria
Marina L. Gavrilova	University of Calgary, Canada
Sumi Helal	University of Florida, USA, and University of Lancaster, UK
Yee Leung	Chinese University of Hong Kong, China

International Liaison Chairs

Ivan Blečić	University of Cagliari, Italy
Giuseppe Borruso	University of Trieste, Italy

Elise De Donker	Western Michigan University, USA
Maria Irene Falcão	University of Minho, Portugal
Robert C. H. Hsu	Chung Hua University, Taiwan
Tai-Hoon Kim	Beijing Jiaotong University, China
Vladimir Korkhov	St Petersburg University, Russia
Sanjay Misra	Østfold University College, Norway
Takashi Naka	Kyushu Sangyo University, Japan
Rafael D. C. Santos	National Institute for Space Research, Brazil
Maribel Yasmina Santos	University of Minho, Portugal
Elena Stankova	St Petersburg University, Russia

Workshop and Session Organizing Chairs

Beniamino Murgante	University of Basilicata, Italy
Chiara Garau	University of Cagliari, Italy
Sanjay Misra	Ostfold University College, Norway

Award Chair

Wenny Rahayu	La Trobe University, Australia
--------------	--------------------------------

Publicity Committee Chairs

Elmer Dadios	De La Salle University, Philippines
Nataliia Kulabukhova	St Petersburg University, Russia
Daisuke Takahashi	Tsukuba University, Japan
Shangwang Wang	Beijing University of Posts and Telecommunications, China

Local Arrangement Chairs

Eligius Hendrix	University of Malaga, Spain
Inmaculada Garcia Fernandez	University of Malaga, Spain
Salvador Merino Cordoba	University of Malaga, Spain
Pablo Guerrero-García	University of Malaga, Spain

Technology Chairs

Damiano Perri	University of Florence, Italy
Marco Simonetti	University of Florence, Italy

Program Committee

Vera Afreixo	University of Aveiro, Portugal
Filipe Alvelos	University of Minho, Portugal

Hartmut Asche	Hasso-Plattner-Institut für Digital Engineering gGmbH, Germany
Ginevra Balletto	University of Cagliari, Italy
Michela Bertolotto	University College Dublin, Ireland
Sandro Bimonte	TSCF, INRAE, France
Rod Blais	University of Calgary, Canada
Ivan Blečić	University of Sassari, Italy
Giuseppe Borruso	University of Trieste, Italy
Ana Cristina Braga	University of Minho, Portugal
Massimo Cafaro	University of Salento, Italy
Yves Caniou	ENS Lyon, France
Ermanno Cardelli	University of Perugia, Italy
José A. Cardoso e Cunha	Universidade Nova de Lisboa, Portugal
Rui Cardoso	University of Beira Interior, Portugal
Leocadio G. Casado	University of Almeria, Spain
Carlo Cattani	University of Salerno, Italy
Mete Celik	Erciyes University, Turkey
Maria Cerreta	University of Naples Federico II, Italy
Hyunseung Choo	Sungkyunkwan University, South Korea
Rachel Chieng-Sing Lee	Sunway University, Malaysia
Min Young Chung	Sungkyunkwan University, South Korea
Florbela Maria da Cruz Domingues Correia	Polytechnic Institute of Viana do Castelo, Portugal
Gilberto Corso Pereira	Federal University of Bahia, Brazil
Alessandro Costantini	INFN, Italy
Carla Dal Sasso Freitas	Universidade Federal do Rio Grande do Sul, Brazil
Pradesh Debba	Council for Scientific and Industrial Research (CSIR), South Africa
Hendrik Decker	Instituto Tecnológico de Informática, Spain
Robertas Damaševičius	Kaunas University of Technology, Lithuania
Frank Devai	London South Bank University, UK
Rodolphe Devillers	Memorial University of Newfoundland, Canada
Joana Matos Dias	University of Coimbra, Portugal
Paolino Di Felice	University of L'Aquila, Italy
Prabu Dorairaj	NetApp, India/USA
M. Noelia Faginas Lago	University of Perugia, Italy
M. Irene Falcao	University of Minho, Portugal
Florbela P. Fernandes	Polytechnic Institute of Bragança, Portugal
Jose-Jesus Fernandez	National Centre for Biotechnology, Spain
Paula Odete Fernandes	Polytechnic Institute of Bragança, Portugal
Adelaide de Fátima Baptista Valente Freitas	University of Aveiro, Portugal
Manuel Carlos Figueiredo	University of Minho, Portugal
Maria Celia Furtado Rocha	Federal University of Bahia, Brazil
Chiara Garau	University of Cagliari, Italy
Paulino Jose Garcia Nieto	University of Oviedo, Spain

Raffaele Garrisi	Polizia di Stato, Italy
Jerome Gensel	LSR-IMAG, France
Maria Giaoutzi	National Technical University of Athens, Greece
Arminda Manuela Andrade Pereira Gonçalves	University of Minho, Portugal
Andrzej M. Goscinski	Deakin University, Australia
Sevin Gümüş	Izmir University of Economics, Turkey
Alex Hagen-Zanker	University of Cambridge, UK
Shanmugasundaram Hariharan	B.S. Abdur Rahman Crescent Institute of Science and Technology, India
Eligius M. T. Hendrix	University of Malaga, Spain and Wageningen University, The Netherlands
Hisamoto Hiyoshi	Gunma University, Japan
Mustafa Inceoglu	Ege University, Turkey
Peter Jimack	University of Leeds, UK

Workshop Organizers

International Workshop on Advances in Artificial Intelligence Learning Technologies: Blended Learning, STEM, Computational Thinking and Coding (AAILT 2022)

Alfredo Milani	University of Perugia, Italy
Valentina Franzoni	University of Perugia, Italy
Oswaldo Gervasi	University of Perugia, Italy

International Workshop on Advancements in Applied Machine-Learning and Data Analytics (AAMDA 2022)

Alessandro Costantini	INFN, Italy
Davide Salomoni	INFN, Italy
Doina Cristina Duma	INFN, Italy
Daniele Cesini	INFN, Italy

International Workshop on Advances in Information Systems and Technologies for Emergency Management, Risk Assessment and Mitigation Based on the Resilience (ASTER 2022)

Maurizio Pollino	ENEA, Italy
Marco Vona	University of Basilicata, Italy
Sonia Giovanazzi	ENEA, Italy
Benedetto Manganelli	University of Basilicata, Italy
Beniamino Murgante	University of Basilicata, Italy

International Workshop on Advances in Web Based Learning (AWBL 2022)

Birol Ciloglulil
Mustafa Inceoglu

Ege University, Turkey
Ege University, Turkey

International Workshop on Blockchain and Distributed Ledgers: Technologies and Applications (BDLTA 2022)

Vladimir Korkhov
Elena Stankova
Nataliia Kulabukhova

St Petersburg State University, Russia
St Petersburg State University, Russia
St Petersburg State University, Russia

International Workshop on Bio and Neuro Inspired Computing and Applications (BIONCA 2022)

Nadia Nedjah
Luiza De Macedo Mourelle

State University of Rio De Janeiro, Brazil
State University of Rio De Janeiro, Brazil

International Workshop on Configurational Analysis For Cities (CA CITIES 2022)

Claudia Yamu
Valerio Cutini
Beniamino Murgante
Chiara Garau

Oslo Metropolitan University, Norway
Università di Pisa, Italy
University of Basilicata, Italy
Dicaar, University of Cagliari, Italy

International Workshop on Computational and Applied Mathematics (CAM 2022)

Maria Irene Falcão
Fernando Miranda

University of Minho, Portugal
University of Minho, Portugal

International Workshop on Computational and Applied Statistics (CAS 2022)

Ana Cristina Braga

University of Minho, Portugal

International Workshop on Computational Mathematics, Statistics and Information Management (CMSIM 2022)

Maria Filomena Teodoro

University of Lisbon and Portuguese Naval Academy,
Portugal

International Workshop on Computational Optimization and Applications (COA 2022)

Ana Maria A. C. Rocha University of Minho, Portugal
Humberto Rocha University of Coimbra, Portugal

International Workshop on Computational Astrochemistry (CompAstro 2022)

Marzio Rosi University of Perugia, Italy
Nadia Balucani University of Perugia, Italy
Cecilia Ceccarelli Université Grenoble Alpes, France
Stefano Falcinelli University of Perugia, Italy

International Workshop on Computational Methods for Porous Geomaterials (CompPor 2022)

Vadim Lisitsa Sobolev Institute of Mathematics, Russia
Evgeniy Romenski Sobolev Institute of Mathematics, Russia

International Workshop on Computational Approaches for Smart, Conscious Cities (CASCC 2022)

Andreas Fricke University of Potsdam, Germany
Juergen Doellner University of Potsdam, Germany
Salvador Merino University of Malaga, Spain
Jürgen Bund Graphics Vision AI Association, Germany/Portugal
Markus Jobst Federal Office of Metrology and Surveying, Austria
Francisco Guzman University of Malaga, Spain

International Workshop on Computational Science and HPC (CSHPC 2022)

Elise De Doncker Western Michigan University, USA
Fukuko Yuasa High Energy Accelerator Research Organization (KEK), Japan
Hideo Matsufuru High Energy Accelerator Research Organization (KEK), Japan

International Workshop on Cities, Technologies and Planning (CTP 2022)

Giuseppe Borruso University of Trieste, Italy
Malgorzata Hanzl Lodz University of Technology, Poland
Beniamino Murgante University of Basilicata, Italy

Anastasia Stratigea	National Technical University of Athens, Grece
Ginevra Balletto	University of Cagliari, Italy
Ljiljana Zivkovic	Republic Geodetic Authority, Serbia

International Workshop on Digital Sustainability and Circular Economy (DiSCE 2022)

Giuseppe Borruso	University of Trieste, Italy
Stefano Epifani	Digital Sustainability Institute, Italy
Ginevra Balletto	University of Cagliari, Italy
Luigi Mundula	University of Cagliari, Italy
Alessandra Milesi	University of Cagliari, Italy
Mara Ladu	University of Cagliari, Italy
Stefano De Nicolai	University of Pavia, Italy
Tu Anh Trinh	University of Economics Ho Chi Minh City, Vietnam

International Workshop on Econometrics and Multidimensional Evaluation in Urban Environment (EMEUE 2022)

Carmelo Maria Torre	Polytechnic University of Bari, Italy
Maria Cerreta	University of Naples Federico II, Italy
Pierluigi Morano	Polytechnic University of Bari, Italy
Giuliano Poli	University of Naples Federico II, Italy
Marco Locurcio	Polytechnic University of Bari, Italy
Francesco Tajani	Sapienza University of Rome, Italy

International Workshop on Ethical AI Applications for a Human-Centered Cyber Society (EthicAI 2022)

Valentina Franzoni	University of Perugia, Italy
Alfredo Milani	University of Perugia, Italy

International Workshop on Future Computing System Technologies and Applications (FiSTA 2022)

Bernady Apduhan	Kyushu Sangyo University, Japan
Rafael Santos	INPE, Brazil

International Workshop on Geodesign in Decision Making: Meta Planning and Collaborative Design for Sustainable and Inclusive Development (GDM 2022)

Francesco Scorza	University of Basilicata, Italy
Michele Campagna	University of Cagliari, Italy
Ana Clara Mourão Moura	Federal University of Minas Gerais, Brazil

International Workshop on Geomatics in Agriculture and Forestry: New Advances and Perspectives (GeoForAgr 2022)

Maurizio Pollino	ENEA, Italy
Giuseppe Modica	University of Reggio Calabria, Italy
Marco Vizzari	University of Perugia, Italy

International Workshop on Geographical Analysis, Urban Modeling, Spatial Statistics (Geog-An-Mod 2022)

Giuseppe Borruso	University of Trieste, Italy
Beniamino Murgante	University of Basilicata, Italy
Harmut Asche	Hasso-Plattner-Institut für Digital Engineering gGmbH, Germany

International Workshop on Geomatics for Resource Monitoring and Management (GRMM 2022)

Alessandra Capolupo	Polytechnic of Bari, Italy
Eufemia Tarantino	Polytechnic of Bari, Italy
Enrico Borgogno Mondino	University of Turin, Italy

International Workshop on Information and Knowledge in the Internet of Things (IKIT 2022)

Teresa Guarda	State University of Santa Elena Peninsula, Ecuador
Filipe Portela	University of Minho, Portugal
Maria Fernanda Augusto	Bitrum Research Center, Spain

13th International Symposium on Software Quality (ISSQ 2022)

Sanjay Misra	Østfold University College, Norway
--------------	------------------------------------

International Workshop on Machine Learning for Space and Earth Observation Data (MALSEOD 2022)

Rafael Santos	INPE, Brazil
Karine Reis Ferreira Gomes	INPE, Brazil

International Workshop on Building Multi-dimensional Models for Assessing Complex Environmental Systems (MES 2022)

Vanessa Assumma	Politecnico di Torino, Italy
Caterina Caprioli	Politecnico di Torino, Italy
Giulia Datola	Politecnico di Torino, Italy

Federico Dell'Anna	Politecnico di Torino, Italy
Marta Dell'Ovo	Politecnico di Milano, Italy

International Workshop on Models and Indicators for Assessing and Measuring the Urban Settlement Development in the View of ZERO Net Land Take by 2050 (MOVEto 2022)

Lucia Saganeiti	University of L'Aquila, Italy
Lorena Fiorini	University of L'aquila, Italy
Angela Pilogallo	University of Basilicata, Italy
Alessandro Marucci	University of L'Aquila, Italy
Francesco Zullo	University of L'Aquila, Italy

International Workshop on Modelling Post-Covid Cities (MPCC 2022)

Beniamino Murgante	University of Basilicata, Italy
Ginevra Balletto	University of Cagliari, Italy
Giuseppe Borruso	University of Trieste, Italy
Marco Dettori	Università degli Studi di Sassari, Italy
Lucia Saganeiti	University of L'Aquila, Italy

International Workshop on Ecosystem Services: Nature's Contribution to People in Practice. Assessment Frameworks, Models, Mapping, and Implications (NC2P 2022)

Francesco Scorza	University of Basilicata, Italy
Sabrina Lai	University of Cagliari, Italy
Silvia Ronchi	University of Cagliari, Italy
Dani Broitman	Israel Institute of Technology, Israel
Ana Clara Mourão Moura	Federal University of Minas Gerais, Brazil
Corrado Zoppi	University of Cagliari, Italy

International Workshop on New Mobility Choices for Sustainable and Alternative Scenarios (NEWMOB 2022)

Tiziana Campisi	University of Enna Kore, Italy
Socrates Basbas	Aristotle University of Thessaloniki, Greece
Aleksandra Deluka T.	University of Rijeka, Croatia
Alexandros Nikitas	University of Huddersfield, UK
Ioannis Politis	Aristotle University of Thessaloniki, Greece
Georgios Georgiadis	Aristotle University of Thessaloniki, Greece
Irena Ištoka Otković	University of Osijek, Croatia
Sanja Surdonja	University of Rijeka, Croatia

International Workshop on Privacy in the Cloud/Edge/IoT World (PCEIoT 2022)

Michele Mastroianni	University of Campania Luigi Vanvitelli, Italy
Lelio Campanile	University of Campania Luigi Vanvitelli, Italy
Mauro Iacono	University of Campania Luigi Vanvitelli, Italy

International Workshop on Psycho-Social Analysis of Sustainable Mobility in the Pre- and Post-Pandemic Phase (PSYCHE 2022)

Tiziana Campisi	University of Enna Kore, Italy
Socrates Basbas	Aristotle University of Thessaloniki, Greece
Dilum Dissanayake	Newcastle University, UK
Nurten Akgün Tanbay	Bursa Technical University, Turkey
Elena Cocuzza	University of Catania, Italy
Nazam Ali	University of Management and Technology, Pakistan
Vincenza Torrisi	University of Catania, Italy

International Workshop on Processes, Methods and Tools Towards Resilient Cities and Cultural Heritage Prone to SOD and ROD Disasters (RES 2022)

Elena Cantatore	Polytechnic University of Bari, Italy
Alberico Sonnessa	Polytechnic University of Bari, Italy
Dario Esposito	Polytechnic University of Bari, Italy

International Workshop on Scientific Computing Infrastructure (SCI 2022)

Elena Stankova	St Petersburg University, Russia
Vladimir Korkhov	St Petersburg University, Russia

International Workshop on Socio-Economic and Environmental Models for Land Use Management (SEMLUM 2022)

Debora Anelli	Polytechnic University of Bari, Italy
Pierluigi Morano	Polytechnic University of Bari, Italy
Francesco Tajani	Sapienza University of Rome, Italy
Marco Locurcio	Polytechnic University of Bari, Italy
Paola Amoruso	LUM University, Italy

14th International Symposium on Software Engineering Processes and Applications (SEPA 2022)

Sanjay Misra	Østfold University College, Norway
--------------	------------------------------------

International Workshop on Ports of the Future – Smartness and Sustainability (SmartPorts 2022)

Giuseppe Borruso	University of Trieste, Italy
Gianfranco Fancello	University of Cagliari, Italy
Ginevra Balletto	University of Cagliari, Italy
Patrizia Serra	University of Cagliari, Italy
Maria del Mar Munoz Leonisio	University of Cadiz, Spain
Marco Mazzarino	University of Venice, Italy
Marcello Tadini	Università del Piemonte Orientale, Italy

International Workshop on Smart Tourism (SmartTourism 2022)

Giuseppe Borruso	University of Trieste, Italy
Silvia Battino	University of Sassari, Italy
Ainhoa Amaro Garcia	Universidad de Alcalà and Universidad de Las Palmas, Spain
Maria del Mar Munoz Leonisio	University of Cadiz, Spain
Carlo Donato	University of Sassari, Italy
Francesca Krasna	University of Trieste, Italy
Ginevra Balletto	University of Cagliari, Italy

International Workshop on Sustainability Performance Assessment: Models, Approaches and Applications Toward Interdisciplinary and Integrated Solutions (SPA 2022)

Francesco Scorza	University of Basilicata, Italy
Sabrina Lai	University of Cagliari, Italy
Jolanta Dvarioniene	Kaunas University of Technology, Lithuania
Iole Cerminara	University of Basilicata, Italy
Georgia Pozoukidou	Aristotle University of Thessaloniki, Greece
Valentin Grecu	Lucian Blaga University of Sibiu, Romania
Corrado Zoppi	University of Cagliari, Italy

International Workshop on Specifics of Smart Cities Development in Europe (SPEED 2022)

Chiara Garau	University of Cagliari, Italy
Katarína Vitálišová	Matej Bel University, Slovakia
Paolo Nesi	University of Florence, Italy
Anna Vanova	Matej Bel University, Slovakia
Kamila Borsekova	Matej Bel University, Slovakia
Paola Zamperlin	University of Pisa, Italy

Federico Cugurullo Trinity College Dublin, Ireland
Gerardo Carpentieri University of Naples Federico II, Italy

International Workshop on Smart and Sustainable Island Communities (SSIC 2022)

Chiara Garau University of Cagliari, Italy
Anastasia Stratigea National Technical University of Athens, Greece
Paola Zamperlin University of Pisa, Italy
Francesco Scorza University of Basilicata, Italy

International Workshop on Theoretical and Computational Chemistry and Its Applications (TCCMA 2022)

Noelia Faginas-Lago University of Perugia, Italy
Andrea Lombardi University of Perugia, Italy

International Workshop on Transport Infrastructures for Smart Cities (TISC 2022)

Francesca Maltinti University of Cagliari, Italy
Mauro Coni University of Cagliari, Italy
Francesco Pinna University of Cagliari, Italy
Chiara Garau University of Cagliari, Italy
Nicoletta Rassu University of Cagliari, Italy
James Rombi University of Cagliari, Italy
Benedetto Barabino University of Brescia, Italy

14th International Workshop on Tools and Techniques in Software Development Process (TTSDP 2022)

Sanjay Misra Østfold University College, Norway

International Workshop on Urban Form Studies (UForm 2022)

Malgorzata Hanzl Lodz University of Technology, Poland
Beniamino Murgante University of Basilicata, Italy
Alessandro Camiz Özyeğin University, Turkey
Tomasz Bradecki Silesian University of Technology, Poland

International Workshop on Urban Regeneration: Innovative Tools and Evaluation Model (URITEM 2022)

Fabrizio Battisti University of Florence, Italy

Abstract. Several methods and operational tools for assessing the sustainability and corresponding aspects can be identified in the current literature. At international level, the use of synthetic indices is clearly established through analytical indicators capable of expressing multiple aspects from an economic, social and environmental perspective. By a literature review, the construction of indices through a multi-criteria approach can be placed in the weights assignment and in construction processes based on the geometric and arithmetic average of values. The allocation of appropriate weights to performance indicators lacks, in particular, an objective methodology and subjective elements linked, e.g., to the decision-makers involved and corresponding interests. This research aims to describe a methodological frame for indices constructing through the multi-criteria approach of the Choquet Integral. The use of Choquet’s integral supports the evaluations of multiple aspects of sustainability as monitoring of the relative unbalanced values, and the weights assignment occurs through analytical functions well-established, as the Shapley function.

Keywords: Sustainable index · Choquet integral · Multi-criteria approaches · Territorial investments · 2030 Agenda

1 Introduction

The sustainable assessment of urban networks in changing perspective has become a central issue for the development and implementation of effective planning strategies. In world-wide context, the political agenda has been rating the impacts of sustainable investments on citizens’ well-being, environmental quality, economic growth within the decision-systems for territories growing. The well-being “sustainable foot-print” at territorial and urban scale steers to revise the income by integrating multiple aspects, also related to the society and environment [1–4].

In light of this, the use of Gross Domestic Product (GDP) as an effective representative measure of the urban/territorial well-being is becoming less obvious in economic terms too. The limits of GDP are recognized in the inability to distinguish among events that could have positive and negative impacts on well-being – e.g., reconstruction following a natural disaster or war –, so to appear an effective indicator that summarizes a country's economic activity in a comprehensive manner, not in view of environmental impacts, working conditions, health, and human-social capital.

An analysis of the current literature revealed several research focused on alternative quantification of well-being, quality of life, sustainable development and societal progress. Namely, alternative methodological approaches to GDP have been defined [5]. To date (2022), the "Istanbul Declaration" - signed by the European Commission, the Organization of the Islamic Conference, the United Nations, the United Nations Development Program (UNDP) and the World Bank in June 2007, at the end of the 2nd Organization for Economic Co-operation and Development World Forum - has stated that there is the need to go "beyond GDP" for assessing the well-being at scale of territory and city [6–9].

Methodological approaches to measure the progress of a society with relative well-being state are advisable in the reference literature. There is search for methods and tools aimed to integrate financial values with social and environmental items not detected in GDP [10]. With a view to moving beyond the use of GDP as the main performance indicator for expressing the well-being state, alternative composite indices have been proposed to enable the societal welfare declined in the dimensions of the sustainability (economic, social and environmental) [11].

The UNDP implements the Human Development Index (HDI), which considers health, income and education information data [12]. Similarly, the Environmental Performance Index (EPI) is developed based on primarily environmental-natural indicators [13]. Dobrovolskiene et al. (2017) in the specific Lithuanian context, develop a composite index to verify the sustainability of real estate projects [14], and Attardi et al. propose the Land Use Policy Efficiency Index for the assessment of the environmental and social performance of urban and regional planning policies [15]. Many of these are obtained by aggregating weighted averages related to the different dimensions of well-being, in such a way as to express the appropriate weight for each dimension [16–20]. Furthermore, Ravallion proposes an alternative aggregation function based on the generalized aggregation formula of Chakravarty [21, 22], which allows for a more effective weighting of dimensions than geometric mean [23]. On the other hand, further studies analyze the strength of weights by implementing linear programming processes capable of evaluating the accuracy of rankings with alternative weights [24–29]. These works do not consider the potential interaction among dimensions, but focus on the impact of alternative weight allocation among well-being dimensions on ranking accuracy.

In order to attempt to express particular sustainable statement with specific indices of environmental, social and economic nature, the current research work proposes the adoption of a method of aggregation - the Choquet Integral (CI) - capable of considering the synergies among the sustainable dimensions for the construction of evaluation indices [30]. The CI has been developed by Murufushi and Sugeno as a powerful aggregation operator over an established set of elements [31], and it has been used in selection cases,

particularly attracting the fuzzy principles. A critical issue encountered in the application of fuzzy measures consists in the exponential complexity in terms of real number for each subset of the criteria and means to evaluate these through appropriate elicitation of interviewed experts or optimization methods [32, 33]. In this sense, Mazziotta and Pareto (2016) propose the structuring of a method to calculate a non-compensatory index, which penalizes the unbalanced values of indicators through the relative standard deviation measurement [34].

In order to capture synergies among dimensions for an index construction, the UNDP moved from the Arithmetic Mean (AM) to the Geometric one (GM) [12]. However, the GM aggregation method doesn't allow to capture the complementarity and synergies among dimensions. A relatively weak performance in one of the dimensions is counted similarly in the composite score obtained. Compared to the UNDP experimentation, the proposed methodological approach develops an alternative and flexible aggregation process able to perceive a set of interactions among the sustainable dimensions, in order to allow different synergies and to detect unbalanced performance among them.

The use and implementation of the CI for obtaining multivariate and composite indices improved in recent years. E.g., Meyer and Pontheire [37] have employed the CI to show that individual preferences could not be effectively described by an additive model (i.e., weighted average aggregation methods) because of complementarities and redundancies among analysis dimensions [38–40]. Many of the other authors take advantage of the CI in the optic to assemble indices that allow different interactions among indicators [41–46], namely Campagnolo et al. [47] applied the CI aggregation method to capture interactions across diverse sustainable factors.

1.1 Aim

The research carried out develops a methodology based on the CI, in order to establish a composite index that could be used: *i*) to assess, from a macro-economic point of view, a well-being level of a country and/or its sub-scale; *ii*) to value, from a micro-economic one, the sustainability of territorial investments. The CI is a general methodology that allows interactions across dimensions (economic, environmental, social) while allocating different relative importance to them. This allows to consider if and how balanced (or unbalanced) the accomplishments across dimensions are and to reveal these differences in the composite score [35, 36].

The paper is organized as follows: in Sect. 2, the methodological approach is illustrated; in Sect. 3, a brief discussion about the CI highlights is reported; in Sect. 4, the conclusions of the research are drawn.

2 Methodological Approach

2.1 Overview

The CI aggregation method [30] is able to support multiple decision-making processes thanks to its ability to collect and synthesize different inputs. Figure 1 describes the four steps of the logical protocol that defines the methodology.

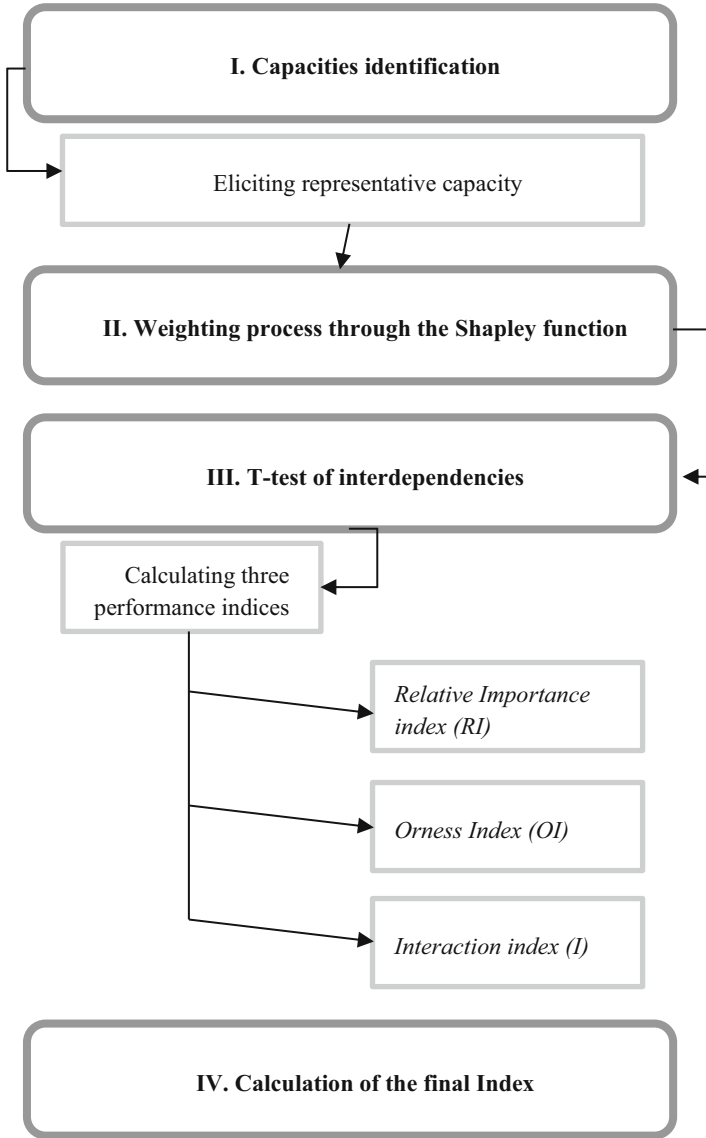

Fig. 1. Logical protocol summary chart for structuring the methodology

Let $\{n_1, n_2, \dots, n_d\}$ be the values of the dimensions described by a set $T = \{1, 2, 3\}$. The «capacities» are a set of functions where 2^T is all possible subsets of the criteria, which assigns a weight from 0 to 1 to each one.

The set function (λ) has to satisfy border and monotonicity conditions as described hereafter:

- i. $\lambda(0) = 0; \lambda(T) = 1;$
- ii. for any $A, B \subseteq T, A \subseteq B \subseteq T \rightarrow \lambda(A) \leq \lambda(B) \leq \lambda(T).$

The *i*) characterizes scenarios in which all dimensions are - respectively - unsatisfactory (i.e., achievements in all dimensions are zero) and satisfactory (i.e., achievements in all dimensions are full). The *ii*) implies that the value of $\lambda(A)$ signifies the capacity (weight) of dimensions belonging to the subset A in T . This can be interpreted as the weight (importance) that one assigns to the fully satisfactory performances of the dimensions belonging to the subset A , and with fully unsatisfactory performances by the residual dimensions.

Specifically, if a subset has two out of three dimensions, then ($\{\text{Dimension1}, \text{Dimension2}\}$) would signify the weight assigned to the scenario where two-dimension achievements are fully satisfactory, and the other one is fully unsatisfactory.

2.2 Capacities Identification

The CI methodology firstly requires to identify the set of capacities. Though, eliciting representative capacity (monotonic weight sets) for the CI method is quite complex task because of the difficulties in identifying the specific issue to be investigated.

Many identifications methods in the current scientific literature have been elaborated by an optimization problem where restrictions are obtained from the preferences of the decision-makers involved. A review of methods employed for the identification of capacities (i.e. maximum-split, minimum variance, minimum distance, least-squares-based approaches) has been carried out by Grabisch et al. [48]. Other examples to be considered in this phase of the construction of the methodology [49] specify how to elicit capacity by representing decision-makers' preferences. Additionally, Bertin et al. [43] have elicited weights and parameters using a nominal group computer-based technique to reduce the severely disagreeing valuations, to generate an *ex-post* consensus and to mitigate the potential expert-selection bias. The expert elicitation method adapted by Bertin et al. [43] is an effective method to reduce the potential expert-selection bias; however, supposing the most expert selection involves high bias levels, the method adopted may not lessen the potential expert-selection bias, whereas it could increase such bias as the consensus weights are closer to the ones selected by the majority of the experts.

2.3 Weighting Process Within the Choquet Integral

In addition to the need to define capabilities, three important features of the CI must be defined to effectively describe the flexibility of the methodology, in order to include decision-maker preferences in assessments related to multiple aspects of well-being from a sustainable perspective. The CI weighting process is based on the calculation of three different performance indices that allow for consideration of the value of the weight of

the assessment domains, specifically indices of: Relative Importance (RI), Orness (OI), Interaction (I). An explanation is given as follows for each index.

Relative Importance Index (RI)

The RI of sustainable dimensions can be assessed using the Shapley value (s_λ) [50] of each dimension, calculated by comparing the weights in every set that includes that dimension against every set that does not include it. Therefore, the overall importance of dimension $i \in T$ can be gained by calculating the average marginal contributions [51, 52] as follows:

$$s_\lambda^{(i)} = \sum_{A \subseteq T/i} \frac{(t-1-a)!a!}{a!} [\lambda(A \cup i) - \lambda(A)]$$

where $t = \text{card}(T)$ and $a = \text{card}(A)$ represent the cardinality of A and T . Hence, to obtain the importance of a single dimension it is possible to compare the weights assigned to subsets that include the single dimension, with the subsets that do not have the dimension considered. In sustainable perspective, with reference to economic, social and environmental dimensions, this would consist of four comparisons: *i*) weight attached to a subset that has social dimension only vs. weight attached to an empty subset; *ii*) weight attached to a subset that includes social and environmental dimensions vs. weight attached to a subset that only includes economic dimension; *iii*) weight attached to a subset that includes social and economic dimensions vs. weight attached to a subset that only includes environmental dimension; *iv*) weight attached to a subset that includes all dimensions vs. weight attached to a subset that includes social and economic dimensions.

In terms of the Möbius representation [53] (m) of λ , the Shapley value of dimension i can be expressed as follows:

$$s_\lambda^{(i)} = \sum_{A \subseteq T/i} \frac{1}{a+1} [m(A \cup i)]$$

It is necessary to point out that, the specific importance of the dimensions (i.e., Shapley values) sums to one ($\sum_{i=1}^d s_\lambda^{(i)} = 1$), and higher Shapley values represent higher relative importance.

Orness Index (OI)

The CI aggregation also permits to define if the choice of the weights by the decision-maker is optimistic or pessimistic [54]. In other words, the OI determines if a decision-maker assumes that a good performance in one dimension balances another one or not. The OI varies between 0 and 1, and higher (lower) values of this index represent that the decision-maker thinks that the dimensions are substitutes (complements) of each other. In particular, if OI equals to 1, the decision-maker judges a fully compensative situation and, in this case, CI aggregation will be equal to the maximum operator. Otherwise, if OI is equal to 0, then the decision-maker considers a fully non-compensative situation, and the CI corresponds to the minimum operator (i.e., the dimensions are perfect complements),

and the index outcome would be the lowest value amongst the dimensions. The OI is calculated as follows:

$$OI^{(i)} = \frac{1}{a-1} \sum_{A \subseteq T/i} \frac{t-a}{a+1} m(A)$$

where $t = \text{card}(T)$ and $a = \text{card}(A)$ correspond to the cardinality of the subset of T and A .

Interaction Index (I)

The main reason for using the CI to structure a composite index is the ability of CI to consider the interaction and the synergies among sustainable dimensions. Taken the three dimensions of the sustainability of i, j and k , an average Interaction index (I) among the three dimensions i, j and k is determined as follows [55]:

$$I_{\lambda}^{(ijk)} = \sum_{A \subseteq T/ijk} \frac{(t-a-3)!a!}{(t-1)!} [\lambda(A \cup ijk) - \lambda(A \cup i) - \lambda(A \cup j) - \lambda(A \cup k) - \lambda(T)]$$

where $t = \text{card}(D)$ and $a = \text{card}(A)$ represent, respectively, the cardinality of A and T .

The quantity $I_{\lambda}^{(ijk)}$ can be explained as a measure of the average marginal interaction among i, j and k . An important property is that $I_{\lambda}^{(ijk)} \in [-1, 1]$ for all $ijk \subseteq T$. The value 1 (respectively -1) corresponding to maximum complementarity, and not, among i, j and k [56]. In terms of the Möbius (m) representation [53] of $I_{\lambda}^{(ijk)}$, the interaction index between the three dimensions i, j and k can be rewritten as:

$$I_{\lambda}^{(ijk)} = \sum_{A \subseteq T/i} \frac{1}{a+1} m(A \cup ijk)$$

3 Highlights of the Choquet Integral for Indices Construction

CI turns out to be an alternative method for defining evaluation indices based on the interaction among the three dimensions of sustainability. The proposed methodological approach takes into account the sustainable dimensions - economic, social and environmental - by means of appropriate performance indicators and brings in itself the functional linkages among the criteria adopted in the evaluation practice, overtaking the weighting attributes to each one. The index achievable by the CI workflow is consequently balanced against the relative weight among the attributes. The development of CI facilitates the solution of the problems of ranking interventions on a territorial scale among different contexts evaluated from the point of view of sustainability. In fact, CI is effective in assessing balanced and unbalanced results across sustainable dimensions, taking care to monitor the different degrees of interaction among them. CI is a generalization of the best known and most widely used weighted average operators (GM, AM), but what distinguishes them as aggregation operators from weighted average operators is

their usefulness in the presence of interacting elements. Limits of the proposed methodology could be found in the possible difficulty of immediately replicating the proposed method because of its intricate mathematical structuring.

However, the definition of an evaluation index with the CI method permits to take into account the actual social, economic and environmental imbalances of each territory/context examined. This leads to interesting and significant implications in terms of evaluation of sustainable performance, especially for the identification of political-urban realities to be given priority in terms of investments in order to effectively allocate financial resources among member countries of the same community (e.g. the European Community) and to support the sustainable development of countries with unbalanced realities, with a view to intergenerational equity [57]. Future research developments are aimed at making the IC method as operable as possible to those who need the realization of an evaluation index to be used in decision-making systems of interest, such as those aimed at the selection of investments for sustainable land development. Also, the CI methodological approach applied to different geographical contexts can be effective in fostering the improvement of territorial realities, by considering the existing socio-economic and environmental inequalities, and not only the main performance aspects.

4 Conclusions

In the design and monitoring of policy strategies aimed at increasing global sustainability, it is necessary that decision-makers are supported - at all stages - by tools, techniques and methodologies that enable them to carry out synthetic assessments as quickly as possible. It is also relevant that these tools could capture the complexity of available data and they are able to integrate in a single assessment the many aspects related to the assessment of sustainability, by involving characteristics of economic, social and environmental sustainability. The use of composite indices, based on the aggregation of analytical data, turns out - to date - to be very effective in supporting Public Administrations and politicians in the identification and selection of sustainable project solutions consistent with the objectives expressed in the 17 Sustainability Goals expressed in the 2030 Agenda [58, 59].

In this sense, the adoption of indices constitutes a relevant support for the Public Administrations in the planning of sustainable strategies, as they allow to adequately consider the multiple aspects of sustainability, as well as the effects generated by the intervention in the reference context. In fact, the proposed methodology is particularly effective in considering different degrees of positional interactions among pairs of dimensions related to sustainability. Specifically, CI allows to highlight the preferences of policy-makers and public agencies based on different sets of preferences, including a variety of levels of interaction among pairs of dimensions and different relative importance of the dimensions (considering the logic of the Shapley function). Moreover, the proposed methodology is able to determine the multiple positive interactions among sustainable dimensions. In fact, the definition of an evaluation index with the CI method permits to take into account the effective social, economic, and environmental unbalances of each territory examined. This leads to interesting and significant implications

in terms of evaluating the sustainable performance, especially for the identification of the political-urban realities to be prioritized in terms of sustainable investments.

In this perspective, further developments of the application of the proposed methodology to both the Italian and European contexts have already been planned, in order to fully analyze the interactions among the sustainability indicators and to obtain a representative measure of sustainability according to the factors of the urban contexts considered: for example, taking into account the current pandemic contingency, it could be possible to compare the effect of Covid-19 pandemic on the real estate market [60], or the sustainability of the same urban context before and after the Covid-19 pandemic. This will allow to carry out a constant monitoring of the conditions of sustainability of the considered urban contexts, by contributing to the achievement of shared sustainable objectives.
