

Trends in Mathematics

Trends in Mathematics is a series devoted to the publication of volumes arising from conferences and lecture series focusing on a particular topic from any area of mathematics. Its aim is to make current developments available to the community as rapidly as possible without compromise to quality and to archive these for reference.

Proposals for volumes can be submitted using the Online Book Project Submission Form at our website www.birkhauser-science.com.

Material submitted for publication must be screened and prepared as follows:

All contributions should undergo a reviewing process similar to that carried out by journals and be checked for correct use of language which, as a rule, is English. Articles without proofs, or which do not contain any significantly new results, should be rejected. High quality survey papers, however, are welcome.

We expect the organizers to deliver manuscripts in a form that is essentially ready for direct reproduction. Any version of \TeX is acceptable, but the entire collection of files must be in one particular dialect of \TeX and unified according to simple instructions available from Birkhäuser.

Furthermore, in order to guarantee the timely appearance of the proceedings it is essential that the final version of the entire material be submitted no later than one year after the conference.

Preface

The theory of evolution partial differential equations (PDEs) has made considerable strides in the last several years. This rapid development was driven on by the connections between this theory and other fields of the mathematics, e.g., the harmonic analysis, and by its strong ties to problems from mathematical physics. This volume includes 13 papers highlighting recent results in mathematics, and focusing on nonlinear PDEs and their applications. Readers will find, e.g., contributions on the qualitative properties of solutions of linear and nonlinear evolution models, as well as results concerning well-posedness, asymptotic profiles of solutions, blow-up behavior, and the influence of low regular coefficients.

We employed a strict blind review process, in the course of which each contribution was evaluated by two anonymous referees. The papers provide a broad range of ideas and include detailed proofs of their results.

Most of the contributors attended the sessions “Recent progress in evolution equations” and “Nonlinear PDEs” during the 11th ISAAC congress, which was held in Växjö, Sweden, in 2017. Some speakers were invited to deliver their talks during a joint day of these two sessions. Though the event is what initially provided the idea of creating a special volume of selected research papers, the present volume is not merely a collection of proceedings, but a stand-alone project gathering original contributions from active researchers on the latest trends in nonlinear evolution PDEs.

The International Society for Analysis, its Applications and Computation (ISAAC) has organized the biennial ISAAC congress at venues around the globe since 1997. The 2017 congress continued the successful series of meetings: in Delaware, USA (1997), Fukuoka, Japan (1999), Berlin, Germany (2001), Toronto, Canada (2003), Catania, Italy (2005), Ankara, Turkey (2007), London, UK (2009), Moscow, Russia (2011), Krakow, Poland (2013), Macau, China (2015). ISAAC is home to nearly 300 members from all regions of the world,

as well as eight special interest groups focusing on different areas of analysis and computation.

Contents

On Effective PDEs of Quantum Physics	1
Ilias Chenn and I. M. Sigal	
Critical Exponents for Differential Inequalities with Riemann-Liouville and Caputo Fractional Derivatives	49
Marcello D'Abbicco	
Weakly Coupled Systems of Semilinear Effectively Damped Waves with Different Time-Dependent Coefficients in the Dissipation Terms and Different Power Nonlinearities	97
Abdelhamid Mohammed Djaouti and Michael Reissig	
Incompressible Limits for Generalisations to Symmetrisable Systems	129
Michael Dreher	
The Critical Exponent for Evolution Models with Power Non-linearity ...	153
Marcelo Rempel Ebert and Linniker Monteiro Lourenço	
Blow-Up or Global Existence for the Fractional Ginzburg-Landau Equation in Multi-dimensional Case	179
Luigi Forcella, Kazumasa Fujiwara, Vladimir Georgiev, and Tohru Ozawa	
Semilinear Damped Klein-Gordon Models with Time-Dependent Coefficients	203
Giovanni Girardi	
Wave-Like Blow-Up for Semilinear Wave Equations with Scattering Damping and Negative Mass Term	217
Ning-An Lai, Nico Michele Schiavone, and Hiroyuki Takamura	
4D Semilinear Weakly Hyperbolic Wave Equations	241
Sandra Lucente	

Smoothing and Strichartz Estimates to Perturbed Magnetic Klein-Gordon Equations in Exterior Domain and Some Applications..... 263
Kiyoshi Mochizuki and Sojiro Murai

The Cauchy Problem for Dissipative Wave Equations with Weighted Nonlinear Terms..... 281
Makoto Nakamura and Hidemitsu Wadade

Global Existence Results for a Semilinear Wave Equation with Scale-Invariant Damping and Mass in Odd Space Dimension 305
Alessandro Palmieri

Wave Equations in Modulation Spaces–Decay Versus Loss of Regularity 371
Maximilian Reich and Michael Reissig
