

Contents:

1. Introduction	pg. 1
1.1 Yeast cells.....	pg. 1
1.2 <i>Kluyveromyces lactis</i>	pg. 4
1.3 Yeasts metabolism.....	pg. 5
1.3.1 Glycolysis.....	pg. 6
1.3.2 Fermentation.....	pg. 7
1.3.3 Respiration.....	pg. 7
Tricarboxylic acid pathway (TCA).....	pg. 8
1.3.4 Glyoxylate cycle.....	pg. 11
1.3.5 Pentose phosphate pathway (PPP).....	pg. 12
1.3.6 Fatty acids (FA).....	pg. 13
Biosynthesis.....	pg. 14
1.3.7 Sterols.....	pg. 17
Ergosterol synthesis.....	pg. 18
1.4 Metabolism regulation.....	pg. 19
1.5 Biotechnology: genetic engineering.....	pg. 21
1.6 <i>rag8</i> mutation.....	pg. 22
2. Purpose of the work	pg. 25
3. Work strategy	pg. 27
3.1 Metabolomics.....	pg. 27
3.2 Applications.....	pg. 31
3.3 From metabolomics to flux analysis.....	pg. 33
3.4 Flux analysis.....	pg. 36
3.5 Isotopomer analysis.....	pg. 39
3.6 General applications.....	pg. 47
4. Matherials and methods	pg. 50
4.1 Methodology.....	pg. 50
4.1.1 Sample obtainment.....	pg. 53

4.1.2 Labeling experiments.....	pg. 53
4.1.3 Metabolites extraction.....	pg. 54
4.1.4 Sample preparation for ¹ H-NMR analysis.....	pg. 54
4.1.5 Sample preparation for ¹³ C-NMR analysis.....	pg. 54
4.2 NMR spectroscopy.....	pg. 54
4.2.1 Sequences.....	pg. 55
a. 1D ¹ H-NMR experiment.....	pg. 55
b. 1D ¹³ C-NMR experiment.....	pg. 56
c. Two-dimensional experiments.....	pg. 59
d. 2D homonuclear TOCSY.....	pg. 62
e. Inverse heteronuclear shift correlation.....	pg. 63
f. HSQC (Heteronuclear Single Quantum Correlation).....	pg. 65
g. HMBC (Heteronuclear Multiple Bond Correlation).....	pg. 65
4.2.2 Acquisition.....	pg. 67
4.2.3 Processing.....	pg. 68
4.2.4 Assignment.....	pg. 68
4.2.5 Quantitative analysis.....	pg. 68
4.3 Statistical Analysis.....	pg. 69
4.3.1 Univariate analysis - Student's t-test.....	pg. 69
4.3.2 Multivariate analysis.....	pg. 70
4.4 Isotopomer analysis.....	pg. 76
4.4.1 Fractional enrichment.....	pg. 78
5. Results and discussion	pg. 80
5.1 Results.....	pg. 80
5.1.1 ¹ H-NMR spectra of hydro-alcoholic extracts.....	pg. 80
5.1.2 ¹ H-NMR spectra of chloroformic extracts.....	pg. 83
5.1.3 Univocal assignment by 2D NMR experiments.....	pg. 87
5.1.4 ¹³ C-NMR spectra from labeling experiment.....	pg. 100
5.1.5 Isotopomeric analysis.....	pg. 102
5.1.6 Quantitative analysis.....	pg. 108
5.2 Discussion.....	pg. 112
5.2.1 Statistical analysis and metabolic network model.....	pg. 112
5.2.2 Isotopomer analysis and flux analysis.....	pg. 119

6. Conclusions

pg. 143

7. Bibliography

pg. 145
