CLOSE-RANGE MINI-UAVS PHOTOGRAMMETRY FOR ARCHITECTURE SURVEY

L. Carnevali, E. Ippoliti, F. Lanfranchi, S. Menconero, M. Russo, and V. Russo

Keywords: Mini UAVs, architectonic survey, façade acquisition, data comparison, instrument validation

Abstract. The survey of historical façades contains several bottlenecks, mainly related to the geometrical structure, the decorative framework, the presence of natural or artificial obstacles, the environment limitations. Urban context presents additional restrictions, binding by ground acquisition activity and leading to building data loss. The integration of TLS and close-range photogrammetry allows to go over such stuff, not overcoming the shadows effect due to the ground point of view. In the last year the massive use of UAVs in survey activity has permitted to enlarge survey capabilities, reaching a deeper knowledge in the architecture analysis. In the meanwhile, several behaviour rules have been introduced in different countries, regulating the UAVs use in different field, strongly restricting their application in urban areas. Recently very small and light platforms have been presented, which can partially overcome these rules restrictions, opening to very interesting future scenarios. This article presents the application of one of these very small RPAS (less than 300 g), equipped with a low-cost camera, in a close range photogrammetric survey of an historical building façade in Bologna (Italy). The suggested analysis tries to point out the system accuracy and details acquisition capacity. The final aim of the paper is to validate the application of this new platform in an architectonic survey pipeline, widening the future application of close-range photogrammetry in the architecture acquisition process.

The International Archives of the Photogrammetry, Remote Sensing and Spatial Information Sciences (ISPRS Archives) is the series of peer-reviewed proceedings published by the International Society of Photogrammetry and Remote Sensing (ISPRS). In the early years of the Society, *Archive Volumes* were published independent of Congress or Technical Commission Symposia.

Since Volume XXXII-3/W14, 1999, the Archives are open access publications, they are published under the Creative Common Attribution 3.0 (4.0 since June 2017) License, see https://publications.copernicus.org/for_authors/licence_and_copyright.html for details.

The publication costs for each Archives volume are settled through the corresponding conference. Therefore, authors do not have to pay article processing charges.

The Archives are listed in the ISI Conference Proceedings Citation Index (CPCI) of the Web of Science, SCOPUS, the E/I Compendex, and the Directory of Open Access Journals (DOAJ).

For decades the physical repository of the archive was hosted by ITC, University of Twente in the Netherlands. ISPRS gratefully acknowledges this support. In 2014 the repository was moved to the Technical Information Library (TIB) at Leibniz Universität Hannover, and is now gradually being made available to the public, as all volumes are being digitised and integrated into this web interface. TIB performs this task as a service to the Society and the spatial science community. ISPRS is greatly indebted to TIB for this kind offer.

ISPRS Archives and Annals - automatic citation counts in Google Scholar enhanced

In order to solve existing problems with Google Scholar the domain part in the URLs for the two ISPRS proceedings series, the Archives and the Annals, have recently been changed. According to the publisher Copernicus, the old URLs will remain valid to avoid any broken links when referencing existing publications. Nevertheless, we would like to point out that using DOI for the reference is the best choice, as it ensures permanent validity.

Volume numbers XLV und XLVII were not applied and therefore the proceedings do not exist

ABSTRACT:

The survey of historical façades contains several bottlenecks, mainly related to the geometrical structure, the decorative framework, the presence of natural or artificial obstacles, the environment limitations. Urban context presents additional restrictions, binding by ground acquisition activity and leading to building data loss. The integration of TLS and close-range photogrammetry allows to go over such stuff, not overcoming the shadows effect due to the ground point of view. In the last year the massive use of UAVs in survey activity has permitted to enlarge survey capabilities, reaching a deeper knowledge in the architecture analysis. In the meanwhile, several behaviour rules have been introduced in different countries, regulating the UAVs use in different field, strongly restricting their application in urban areas. Recently very small and light platforms have been presented, which can partially overcome these rules restrictions, opening to very interesting future scenarios. This article presents the application of one of these very small RPAS (less than 300 g), equipped with a low-cost camera, in a close range photogrammetric survey of an historical building façade in Bologna (Italy). The suggested analysis tries to point out the system accuracy and details acquisition capacity. The final aim of the paper is to validate the application of this new platform in an architectonic survey pipeline, widening the future application of close-range photogrammetry in the architecture acquisition process.

1. INTRODUCTION

The digital 3D survey of building façades represents a well-established issue, which has been improved in the last 15 years thanks to the introduction of several active and passive digital systems. In the last decade the integration of range-based and image-based survey methodologies has enhanced the acquisition process in terms of geometry and RGB data capturing, going over some limitations or bottlenecks present in the survey pipeline, enlarging their application in several architectural contexts. Unfortunately, these integrated approaches still suffer limitations, mainly due to the ground point of view, sometimes reduced raising the instruments with truck buckets, telescopic rods or viewing from a nearby windows. The introduction of light UAVs (Unmanned Aircraft Vehicle) or RPAS (Remotely Piloted Aircraft Systems) equipped with digital camera seems to be in such sense the best solution to acquire hidden or unreachable building areas, overcoming terrain limitations. The integration between high-res cameras, Computer Vision codes and RPAS has significantly increased the potentiality of this close-range photogrammetric approach. In the last years the use of these platforms to support building analysis has extremely grown, applying these systems for multi-scale acquisition campaigns in different fields. At the same time this RPAS explosion has seen in some country, i.e. in Italy, the introduction of several restrictive laws for safety purposes, which have started to regulate the use of UAVs in several field, context and operative

condition, restricting their application to very few situations and requiring only specialized flight operator. This condition is mainly evident if the case study analysed is in urban contexts, which are liable to several flight rules, *de facto* making almost unfeasible the application of these platforms for survey purposes. The introduction of inoffensive micro-RPAS lighter than 300 grams has opened new scenarios for close-range photogrammetry application, enlarging their use in several contexts. These new platforms, normally equipped with very small digital camera, are more subject to external weather conditions, minor steadiness and low image quality comparing with light UAVs system, elements which can affect data architecture acquisition in terms of accuracy, uncertainty, resolution, data reliability.

The problems are therefore related to the real usability of these small and very light RPAS systems to support an architectural survey. Is it possible to entrust these platforms for acquiring reliable data related both the global framework and the details distributed on a building façade, supporting architecture analysis and restitution? The paper tries to suggest a first answer to these question, proposing an experimental pipeline mainly focused to verify data reliability and resolution capability of a micro-RPAS Spark system (DJI). The UAV system is framed inside an integrated survey process with active and passive techniques applied to survey a building façade of an historical building in Bologna (Italy). The research is an outcome of university and freelance co-partnership¹.

¹ University has played the following roles: scientific coordination (L. Carnevali), archive research activity (E. Ippoliti), range-based and topographic acquisition (F. Lanfranchi), image-based data processing and writing of Paragraph 4 (S. Menconero), range-based and image-based data interpretation, writing of Paragraph 1,2,3,5 (M. Russo). The free-lance activity regarded UAV campaign planning and image acquisition (V. Russo).

2. STATE OF THE ART

The range-based and image-based survey techniques are currently applied in architecture acquisition campaigns, well-known both in scientific and applicative terms. In Italy the first experimentations of range acquisition devoted to architectures survey regard the early years of XXI Century (Addison et al. 2000; El-Hakim et al. 2003) but they have seen a very quick and rapid growth in the last 15 years, thanks to several experimental application in Cultural Heritage fields, as archaeology (Guidi et al. 2006), architecture (Gaiani, 2001; Bianchini et al. 2003), sculpture (Levoy et al. 2000; Bernardini et al. 2002) and Design one (Guidi et al. 2010).

On the other hand, processing unstructured point clouds from range instruments has not improved significantly in the last decade and it is essentially still based on clouds alignment with target or iterative closest point (ICP) algorithm (Besl et al. 1992; Chen et al. 1992), data filtering, and meshing through reverse and range-based modeling processes.

Close range photogrammetry is more deep-rooted in the survey activity (Kraus, 2007; Luhmann et al. 2014), even if it has boosted its importance with the introduction of software which easily support both digital photogrammetric pipeline and the image-based modeling activity (Remondino et al. 2006; Remondino et al. 2014). These software, mostly based on automatic procedures, are nowadays used in several application field, even if they present some blackbox in data processing and lacks in managing each single step. Some research in such direction have been carried out, deeply analysing both data process (Remondino et al. 2013) and conclusive results coming out from different platforms (Murtiyoso et al. 2017).

In recent years the integration between high-res cameras, Computer Vision codes and RPAS have significantly increased the potential of this photogrammetric technique (Vosselman, 2010), in particular regarding mini-UAVs or micro-RPAS (Turner et al. 2012, Bolognesi et al. 2014, Nex et al. 2014), opening to the possible integration between aerial and terrestrial close-range images.

The use of UAVs has seen a first widespread in the archaeology survey field, providing a general and never seen before point of view of the whole surroundings (Fernandez-Hernandez et al. 2015; Remondino et al. 2011), using either fixed-wing (Suwardhi et al. 2015) or a rotary-wing UAV (Chiabrando et al. 2015). Another application of UAVs is related to close-range modeling or inspection of buildings by using the rotary-wing type (Caroti et al. 2015; Cefalu et al. 2013; Wenzel et al. 2013), a methodology often integrated with the terrestrial passive and active acquisition. (Achille et al. 2015; Grenzdörffer et al. 2015). The acquisition and interpretation of digital data has forced to understand and manage this new kind of knowledge, introducing in the same time a sort of digital divide between technical and humanistic competence. For this latter reason it is useful to test instruments and methodologies, verifying from one side their metrological reliability, from the other producing intelligible results for non-technical people, creating a knowledge connection between different application fields (Stylianidis et al. 2016).

Nowadays, 3D survey workflow applied for the urban façades acquisition is not a novelty, nevertheless it presents several "bottlenecks" in critical environmental conditions (Toschi et al. 2017), such as the historical city centres, which are strongly bound by each country set of rules (Stoker et al. 2017), particularly pressing in the Italian country (ENAC, 2016). Very few survey experimentations have adopted ultra-light UAVs for surveying architecture case study (Russo et al. 2018) but this field

open very interesting scenarios in terms of testing methodology, giving the opportunity to widen close-range photogrammetry applications, introducing another important chance from the research point of view.

3. CASE STUDY

Villa Aldrovandi Mazzacorati stands on the territory of Camaldoli's estate, acquired by Annibale Marescotti in 1616. In that period the land was used for agricultural purposes, with a little and modest owners' home. A few years later, in 1690, the noble dwelling with its garden passed to Aldrovandi family by inheritance. Despite some house transformations has been carried out, it maintained its single-storey structure almost unchanged. In 1761 important transformation works has been started. In 1763 a little theatre inside the palace was inaugurated with two orders of lodges supported by caryatids and telamons made by Tadolini, with busts by Balugani and paintings by Basoli. This theatre had a leading role for the diffusion of the Italian Theatre culture, thanks to the frequent representations of the most famous companies of that time (Calore, 2004). In 1765 the second floor of the villa was raised by Francesco Tadolini's project, inspired by the neoclassical modules with the central six-columned portico, tympanum and semi-elliptical porticoed wings (Guidicini, 1868).

This architectonical configuration reminds the Venetian Villa inspired by Palladio (i.e. Villa Badoer) translated by the stylistic rules of Bologna area. At the end of the 18th century the building became property of the Marquises Mazzacorati, who preserved the actual architecture and surroundings. Today a solemn entrance gate leads to an Italian garden which frames the Villa, with two meadows and fountains. Currently the villa, in addition to the theatre still in use, houses offices and clinics of health and social services in the city of Bologna. Inside the villa there is also the "Mario Massacesi" Historical Museum of Soldatino, which collects more than 12 000 pieces of soldiers in various materials built since 1800.

The actual building (Figure 1) contains different interesting aspects which make it suitable for the survey experimentation. From the architectonical point of view, the main façade analysed refers to a neoclassic style, so it contains several sculptural elements (capitals, friezes, tympanum, balustrades, dripstones) framed in an articulated architectonic structure. The building surroundings have pledged a suitable working condition, due to the park area and consequent presence of a wide space in front of the Villa.

Despite this appropriate working condition, the application of any single survey methodology bounded to the ground would have led to several lacks in data acquisition. In fact, the geometrical complexity of the façade and the presence of an articulated decorative framework should lead to evident shadows effects, extended by the presence of a building yard and consequent artificial occlusions. Another obstacle for the optical survey approach is represented by the anti-fall protection net, which covers part of narthex aperture and the complete tympanum area (Figure 2). At the end, the variation of scale from the façade and the single decoration requires a multi-scale approach, foreseeing a suitable sampling step both for the whole façade and the single sculptural elements.

All these characteristics lead to plan a multi-resolution survey campaign based on active and passive techniques, covering as much possible façade surface with a suitable sampling step, in the meanwhile having redundant data useful for a comparison step and data validation.

Figure 1. Pictures of the main façade of Villa Aldrovandi Mazzacorati and some architectonic and sculptural details.

A multi-resolution survey approach need to face and solve acquisition problems linked both the global structure and its details survey. But the integration between image-based and range-based acquisition approaches from the ground is not suitable and adequate to sample all the façade survey for shadow effects. In addition, the presence of several sculptural elements framed in the upper part of the façade of 29,3 x 19,6 meters doesn't allow to complete the façade acquisition, even adopting a close-range photogrammetry approach based on the use of both digital camera from the terrain point of view and mounted on a telescopic rod. Starting from the clear limitations showed by a survey solution based on active and passive techniques framed in a "standard" acquisition process, a photogrammetric approach based on RPAS was considered the best solution. In fact, it can perform an high density and coherent acquisition of the whole façade, reducing the shadows affect and preserving the complex and distributed sculptural details.

Figure 2. Survey artificial obstacles schema.

4. SURVEY AND MODELING

4.1 Acquisition methodology

The photogrammetric survey of the façade was performed through a DJI Spark UAV and its integrated camera. The small UAV (Figure 3) is equipped with propeller guards, compulsory to operate in critical scenarios, having a take-off weight of 340 g. Therefore, to operate in the urban area complying with the maximum allowed weight, the aircraft was slightly lightened just below 300 g. (Table 1)

Figure 3. DJI Spark during one of the flight missions.

Even if the survey was planned inside an urban park, with a more suitable operative condition respect to a standard urban UAVs acquisition, all ENAC rules have been followed by the RPAS pilot. The survey has been planned during the public offices and clinics closing time, to avoid any interference between survey activities and people passage, pledging a safe operating condition.

To obtain the best solution in terms of geometrical acquisition, different flights were planned. The survey of the whole façade was carried out considering a constant distance of about 10 m between RPAS camera and façade, evaluating carefully both the flight time and the global number of shots required to cover all the building surface, obtaining an average Ground Sample Distance (GSD) of 4 mm. The images were captured with a baseline of 2 m along the single vertical paths, to ensure an average overlapping of 80% in the vertical direction. These paths were fixed at 6 meters distance, obtaining an overlap of 60% in horizontal direction, covering the whole surface with 7 vertical paths (Figure 4). The overlap considered have been much higher in the flight direction because a manual flight has been carried on and it has been difficult to respect the programmed trajectory and maintain a constant speed in manual driving configuration. For each RPAS hovering stop, three different superimposed images have been acquired, the first one with axe perpendicular to the façade, the other two with sloped axis in right and left direction, covering a global field of view of approximatively 180°. An embedded proximity sensor helped to maintain the proper distance from the façade to comply with the flight plan as much as possible.

An additional acquisition campaign has been planned, devoted to survey the entrance steps of the palace partially hidden by work in progress. For the tympanum survey, a similar approach has been followed, covering the whole area with a sequence of 4 nadiral images distributed in each vertical column for 12 vertical paths, following the same overlapping rules. In this survey

acquisition a mean distance of 2/3 meters has been considered, performing a finale GSD of 1 mm.

Aircraft specifications*	
Take-off weight (g)	300
Dimensions (mm)	143×143×55
Max flight time (min)	16 (no wind)
Operating temperature range (°C)	0–40
Maximum work range (km)	1–2
Satellite Positioning System	GPS/GLONASS
Hover accuracy range – Horizontal (m)	+/- 0.3
Hover accuracy range – Vertical (m)	+/- 0.1
Camera specifications	
Sensor format	6.16 x 4.60
Sensor	1/2.3" CMOS
Lens	FOV 81.9°
ISO range	100-1600
Image resolution (px)	3968 x 2976
Pixel size (μm)	1.55
Focal length (mm)	4.49
Diagonal crop factor	5.6
Flight Plan parameters	
Near to far façade flying distance (m)	2-10
Near to far GSD (mm)	1-4
Area covered by near image (m)	3.1 x 2.3
Area covered by far image (m)	15.4 x 11.5
Vertical overlap (along flight line)	80 %
Lateral overlap	60 %

Table 1. DJI Spark specifications (*from www.dji.com) and flight plan Parameters.

In this case no sloped images have been planned, considering the 81,9° camera field of view sufficient to sample the whole surface. At the end two different single photogrammetric campaigns have been carried on, acquiring single sculptural examples, like a capital and a statue in the upper part of the façade. In both these latter cases, a sequence of convergent images around the detail were acquired at a survey distance of 2/3 meters.

Manual flight missions were performed for all photogrammetric campaigns, capturing different image sets with fixed exposure value of 1/500 and ISO 400. The total time spent for UAV data acquisition was about 1 hour, considering both the architectonic survey and the sculptural one: a total number of 189 images were taken to sample the whole façade, covering an area of about 35 m wide x 23 m high, while 84 images were used for the detailed tympanum survey, 10 images for the capital and 18 for the statue (Table 2). Regarding camera calibration, a self-calibration approach was adopted testing the simplest survey procedure, modeling the radial distortion with the Brown's model, even if some authors recommend more robust camera calibration.

A topographic campaign has been planned at the end of the photogrammetric survey, to acquire GCP photogrammetric reference points on the façade (Figure 5).

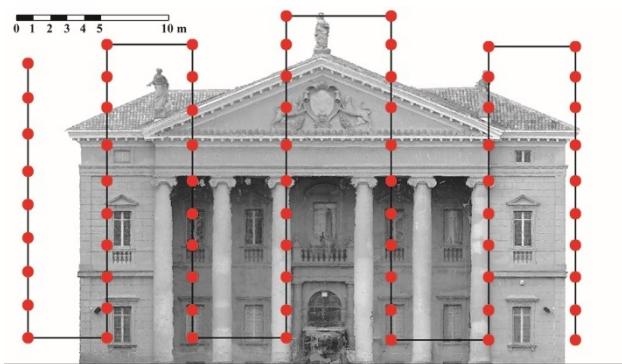

Figure 4. Flight plan for the whole façade with acquisition shots.

A total of 31 points identified by architectural features on the external walls of the building were surveyed by a Geomax Zoom 35 Pro total station from a local network established in front of the building. The topographic survey required one hour. At the end, a phase shift 3D laser scanner (Focus 3D, Faro) has been used to acquire from the ground a sequence of scans, creating a reference point clouds which can be used to verify the global quality of the photogrammetric campaign. In the range-imaging planning 5 different scans has been considered, with a mean working distance of 16 meters from the façade: one central scan with a 4 cm sampling step, four lateral ones with a resolution of 8 cm. The 3D scanning survey required one hour.

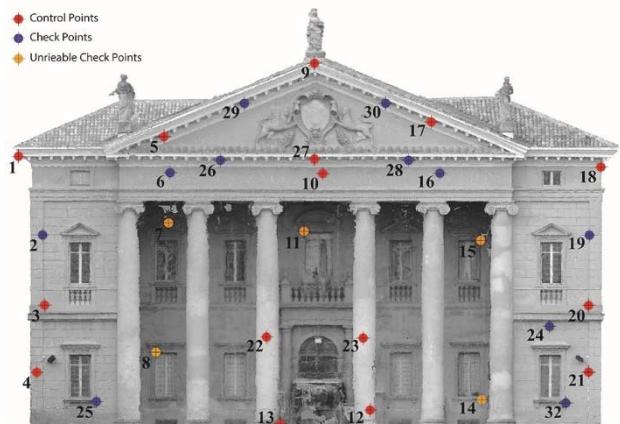

Figure 5. GCPs network distributed on the façade.

4.2 Data process

Photogrammetric data were processed by the commercial software PhotoScan Professional (Agisoft), assuming the computation parameters listed in Table 4. During the image orientation step, 14 photogrammetric reference points were used as control points for the bundle adjustment, framing the entire data set in the topographic network and minimizing the orientation errors.

The presence of different dark images in the image set, due to the camera set-up and the limitation in acquiring shaded surface, has implied a higher time in selecting GCP, affecting also the precision in their recognition (Figure 6, Table 3).

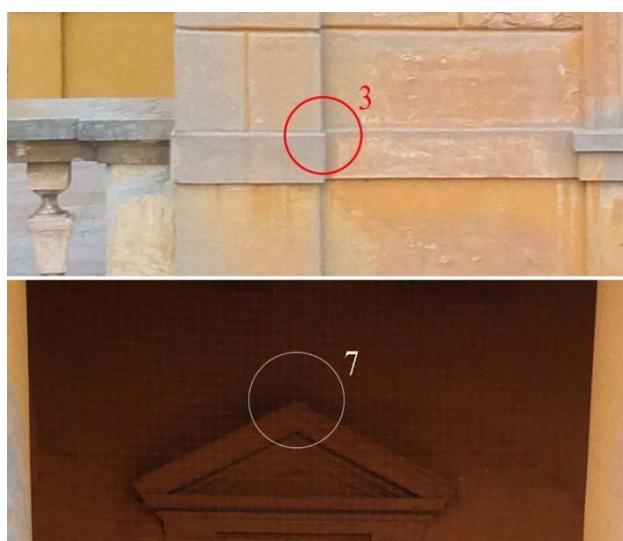

Figure 6. Distinct levels of GCPs recognizability in relation with their façade position.

The maximum alignment residual computed on the control points after the bundle adjustment is 4.7 cm as spatial vector relative to the point 13, while the maximum XYZ component is 2.9 cm in X direction (approximately parallel to the façade) for the point 5. The root mean square value of the entire orientation project is 3.2 cm. The resulting photogrammetric dense cloud of the whole façade, obtained through the photogrammetric and SfM workflow built with the parameters shown in Table 4, consisted of about 23 million points (Table 2). All the SfM process to obtain the final dense cloud required 23 hr.

A similar process has been followed to process images related to the tympanum, introducing the topographic GCPs in order to orient in the same reference system the detailed survey, obtaining a multi-resolution 3D model. In this case any quality check was carried on, evaluating the metrological aspect only for the whole façade. A post-processing of 15 hours has allowed to obtain a dense cloud of 21.5 million of points (Table 2).

Images related to the capital and statue were than processed separately, creating two different 3D model. These images were firstly oriented in the tympanum project before introducing GCPs, completing the multiresolution model (Table 2).

Global façade			
# Img	Tie Points	# Dense Points	# Polygon
189	48.570	23.181.000	4.588.000
Tympanum			
84	42.750	21.554.000	4.310.000
Capital			
10	4620	1.760.000	4.700.000
Statue			
18	20.180	1.900.000	4.325.000

Table 2. Points and polygon created during SfM process

The final TLS point clouds were registered through ICP algorithms and framed in the same reference system of the photogrammetric dense cloud, thanks to the same GCPs, applying a six-parameters transformation (invariant scale). Due to the evident presence of lots of sculptural and architectonic elements and the building dimension, several shadow areas were present in the final range point cloud, which didn't affect the role of gold standard in the comparison phase.

4.3 Data comparison

Data comparison and quality check have been performed in two distinct phases, carrying on a geometrical analysis and a quality check. The first one was addressed from one side to a punctual evaluation of the distance between GCPs and relative photogrammetric points, from the other a global evaluation on the geometrical reliability of the whole dense point clouds obtained at the end of the SfM process, comparing range-based and image-based data. As previously explained, a set of check points surveyed with a total station was used to assess the accuracy of the photogrammetric model, obtaining average values of the residuals compatible with the respective ones computed on the control points (Table 3).

The analyses started from the identification of the 17 topographic points on the images, using them as check points to perform a first validation of the photogrammetric model. Higher residuals values were detected on the check points respect to the orientation points, with a RMS of 5.0 cm, but some points located under the narthex have showed very high values, probably due to both the minor detecting precision carried on in the dark images

and the lower images overlapping, with relative definition of few projections.

Control Points		Check Points	
Points	Error (m)	Points	Error (m)
1	0.04	2	0.03
3	0.02	6	0.02
4	0.02	7	0.12
5	0.04	8	0.12
9	0.02	11	0.10
10	0.02	14	0.08
12	0.04	15	0.11
13	0.05	16	0.02
17	0.02	19	0.02
18	0.02	24	0.03
20	0.03	25	0.05
21	0.04	26	0.02
22	0.02	27	0.01
23	0.03	28	0.02
		29	0.03
		30	0.02
		32	0.04
Mean Error		0.03	0.05

Table 3. Control and check points 3D residuals.

In fact, excluding these points from the RMS residual calculation of the check point, the RMS value obtained is 3 cm, compliant with the orientation residual one. To perform a further and more effective validation of the photogrammetric survey, a reference model of the façade realized by TLS was compared with the photogrammetric point cloud in Cloud Compare software, highlighting the deviations in the different areas of the façade between them, using an appropriate colormap. The colour scale indicates deviations between 0 and 25 cm. The analysis showed a good congruence between clouds related to the near façade, with absolute deviations which do not exceed 5 cm. But there are some areas located under the narthex where the differences reach values ranging from 5 to 25 cm (Figure 7), due to a lower image coverage and a greater difficulty in image orientation, which led to a noisier data. Even if present, no laser scanners shadows have influenced this comparison, since the deviations were computed for each point of the laser scanner cloud, exploiting the high density of both clouds.

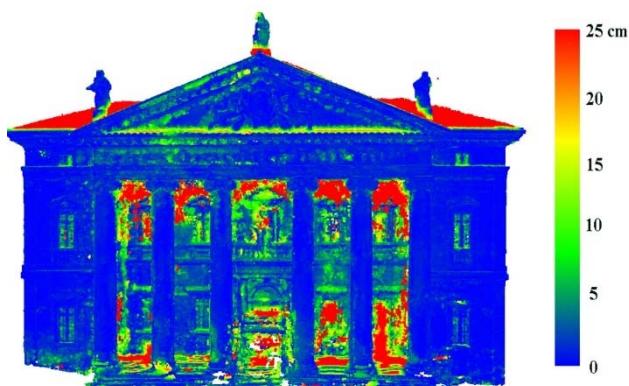

Figure 7. Data comparison between TLS and photogrammetric point clouds

Once the dense photogrammetric cloud has been validated, a textured decimated mesh of 4.6 million of polygon of the whole façade has been generated, in order to build an ortho-mosaic image (Figure 8). The resulting orthophoto of the façade has a

global GSD of 3.6 mm, according with the 4 mm sampling step of the initial images. The same activity has been carried out to create the 3D polygonal model of the tympanum, the capital and the statue, obtaining a decimated models of about 4.5 million of polygons for each element (Table 2). The quality analysis carried out on the final model, mainly based on their visualization in virtual environment, has allowed to test the capability of the survey approach to acquire detail, creating high density 3d model of single artefacts framed inside a building façade (Figure 9).

Figure 8. Ortho-mosaic of the building façade.

Orientation	
Accuracy	High
Pair selection	Disabled
Key point limit	200 000
Tie point limit	50 000
Reference settings	
Marker accuracy (m)	0.005
Marker accuracy (pix)	1
Tie point accuracy (pix)	2
Dense cloud building	
Quality (façade)	High
Quality (details)	Ultra-High
Depth filtering	Mild
Meshing and texturing	
Number of polygon	High
Façade texture (pix)	4096 x 4096
Details texture (pix)	2048 x 2048

Table 4. Computation parameters used in Photoscan.

5. CONCLUSION

The results presented in this article showed that a survey of a complex façade carried on with a small RPAS like the DJI Spark is feasible. In particular, the final results showed from one side a reliable orthoimage of the façade with a geometrical quality suitable for its subsequent drawing representation, from the other some high-res 3D polygonal models useful for architectonic details analysis and representation.

The quality check carried on between photogrammetric points and topographic reference data has reported a mean RMS values of 3 mm, while the comparison between the UAV point clouds and TLS reference one highlighted a deviation of few centimetres, demonstrating a fine quality in terms of data accuracy and reliability. Only the façade under the narthex presented higher deviations, due to the survey condition which led to a lower quality in terms of orientation, point definition,

increasing the surface noise. Instead, the anti-fall protection net has no affected the quality of geometrical acquisition. In general, to go over the highlighted limitations and reaching a compliant knowledge of the building, the best survey solution is still defined by the integration between active and passive methodologies, using UAV with high-res camera if it is permitted. But the experimental campaign described in this paper has demonstrated that this small UAV typology equipped with low-cost digital cameras can open new scenarios, leading to an almost complete

acquisition of an architectural subject, where both ground photogrammetry and laser scanning provide unsatisfactory result, going over several operating limitations. Regarding future research, some additional tests must be planned to refine a suitable methodology, with the awareness that future sensors development will help in reaching higher results, likely adding to the survey path a very important instrument of architectural knowledge, preserving in the meanwhile the possibility to create multi-resolution reliable 3D models.

30 May 2018

A FRAMEWORK FOR ARCHITECTURAL HERITAGE HBIM SEMANTIZATION AND DEVELOPMENT

S. Brusaporci, P. Maiezza, and A. Tata
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 179-184, <https://doi.org/10.5194/isprs-archives-XLII-2-179-2018>, 2018

30 May 2018

EVALUATION OF PHOTOGRAMMETRIC BLOCK ORIENTATION USING QUALITY DESCRIPTORS FROM STATISTICALLY FILTERED TIE POINTS

A. Calantropio, M. P. Deselligny, F. Rinaudo, and E. Rupnik
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 185-191, <https://doi.org/10.5194/isprs-archives-XLII-2-185-2018>, 2018

30 May 2018

RESPONSIVE URBAN MODELS BY PROCESSING SETS OF HETEROGENEOUS DATA

M. Calvano, A. Casale, E. Ippoliti, and F. Guadagnoli
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 193-200, <https://doi.org/10.5194/isprs-archives-XLII-2-193-2018>, 2018

30 May 2018

INDOOR AND OUTDOOR MOBILE MAPPING SYSTEMS FOR ARCHITECTURAL SURVEYS

M. Campi, A. di Lugo, S. Monaco, M. Siconolfi, and D. Palomba
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 201-208, <https://doi.org/10.5194/isprs-archives-XLII-2-201-2018>, 2018

30 May 2018

A NEW PROTOCOL FOR TEXTURE MAPPING PROCESS AND 2D REPRESENTATION OF RUPESTRIAN ARCHITECTURE

L. Carnevali, M. Carpiceci, and A. Angelini
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 209-215, <https://doi.org/10.5194/isprs-archives-XLII-2-209-2018>, 2018

30 May 2018

CLOSE-RANGE MINI-UAVS PHOTOGRAMMETRY FOR ARCHITECTURE SURVEY

L. Carnevali, E. Ippoliti, F. Lanfranchi, S. Menconero, M. Russo, and V. Russo
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 217-224, <https://doi.org/10.5194/isprs-archives-XLII-2-217-2018>, 2018

30 May 2018

"TORINO 1911" PROJECT: A CONTRIBUTION OF A SLAM-BASED SURVEY TO EXTENSIVE 3D HERITAGE MODELING

F. Chiabrandi, C. Della Coletta, G. Sammartano, A. Spanò, and A. Spreafico
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 225-234, <https://doi.org/10.5194/isprs-archives-XLII-2-225-2018>, 2018

30 May 2018

PHOTOGRAMMETRY FOR ARCHAEOLOGY: COLLECTING PIECES TOGETHER

A. G. Chibunichev, V. A. Knyaz, D. V. Zhuravlev, and V. M. Kurkov
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 235-240, <https://doi.org/10.5194/isprs-archives-XLII-2-235-2018>, 2018

30 May 2018

SEMANTIC SEGMENTATION OF BUILDING ELEMENTS USING POINT CLOUD HASHING

M. Chizhova, A. Gurianov, M. Hess, T. Luhmann, A. Brunn, and U. Stilla
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 241-250, <https://doi.org/10.5194/isprs-archives-XLII-2-241-2018>, 2018

30 May 2018

INTERACTIVE IMMERSIVE VIRTUALMUSEUM: DIGITAL DOCUMENTATION FOR VIRTUAL INTERACTION

P. Clinì, L. Ruggeri, R. Angeloni, and M. Sasso
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 251-257, <https://doi.org/10.5194/isprs-archives-XLII-2-251-2018>, 2018

30 May 2018

CULTURAL HERITAGE RECONSTRUCTION FROM HISTORICAL PHOTOGRAPHS AND VIDEOS

F. Condorelli and F. Rinaudo
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 259-265, <https://doi.org/10.5194/isprs-archives-XLII-2-259-2018>, 2018

30 May 2018

IMPROVING IMAGE MATCHING BY REDUCING SURFACE REFLECTIONS USING POLARISING FILTER TECHNIQUES

N. Conen, H. Hastedt, O. Kahmen, and T. Luhmann
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 267-274, <https://doi.org/10.5194/isprs-archives-XLII-2-267-2018>, 2018

30 May 2018

SELF-ASSEMBLED ROV AND PHOTOGRAMMETRIC SURVEYS WITH LOW COST TECHNIQUES

E. Costa, F. Guerrà, and P. Vernier
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 275-279, <https://doi.org/10.5194/isprs-archives-XLII-2-275-2018>, 2018

30 May 2018

4D-SFM PHOTOGRAMMETRY FOR MONITORING SEDIMENT DYNAMICS IN A DEBRIS-FLOW CATCHMENT: SOFTWARE TESTING AND RESULTS COMPARISON

S. Cucchiaro, E. Maset, A. Fusilli, and F. Cazorzi
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 281-288, <https://doi.org/10.5194/isprs-archives-XLII-2-281-2018>, 2018

30 May 2018

ANCIENT SHIPYARD ON TURKEY'S DANA ISLAND: ITS 3D MODELLING WITH PHOTOGRAMMETRY AND COMPUTER GRAPHICS

A. Denker and H. Oniz
Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 289-296, <https://doi.org/10.5194/isprs-archives-XLII-2-289-2018>, 2018

30 May 2018

A METADATA BASED APPROACH FOR ANALYZING UAV DATASETS FOR PHOTOGRAHMETRIC APPLICATIONS

A. Dhanda, F. Remondino, and M. Santana Quintero

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 297-302, <https://doi.org/10.5194/isprs-archives-XLII-2-297-2018>, 2018

30 May 2018

OPEN SOURCE HBIM FOR CULTURAL HERITAGE: A PROJECT PROPOSAL

F. Diara and F. Rinaudo

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 303-309, <https://doi.org/10.5194/isprs-archives-XLII-2-303-2018>, 2018

30 May 2018

3D RECONSTRUCTION-REVERSE ENGINEERING – DIGITAL FABRICATION OF THE EGYPTIAN PALERMO STONE USING BY SMARTPHONE AND LIGHT STRUCTURED SCANNER

F. Di Paola and L. Inzerillo

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 311-318, <https://doi.org/10.5194/isprs-archives-XLII-2-311-2018>, 2018

30 May 2018

POSSIBILITIES OF PROCESSING ARCHIVAL PHOTOGRAHMETRIC IMAGES CAPTURED BY ROLLEI 6006 METRIC CAMERA USING CURRENT METHOD

A. Dlesk, P. Raeva, and K. Vach

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 319-323, <https://doi.org/10.5194/isprs-archives-XLII-2-319-2018>, 2018

30 May 2018

3D SURVEY IN COMPLEX ARCHAEOLOGICAL ENVIRONMENTS: AN APPROACH BY TERRESTRIAL LASER SCANNING

D. Ebbolese, G. Dardanelli, M. Lo Brutto, and R. Sciotino

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 325-330, <https://doi.org/10.5194/isprs-archives-XLII-2-325-2018>, 2018

30 May 2018

IMPROVING SPHERICAL PHOTOGRAHMETRY USING 360° OMNI-CAMERAS: USE CASES AND NEW APPLICATIONS

G. Fangi, R. Pierdicca, M. Sturari, and E. S. Malinverni

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 331-337, <https://doi.org/10.5194/isprs-archives-XLII-2-331-2018>, 2018

30 May 2018

AUTOMATED SHAPE ANALYSIS OF TEETH FROM THE ARCHAEOLOGICAL SITE OF NERQIN NAVER

A. Gaboutchian, H. Simonyan, V. Knyaz, G. Petrosyan, L. Ter-Vardanyan, N. A. Leybova, and S. V. Apresyan

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 339-345, <https://doi.org/10.5194/isprs-archives-XLII-2-339-2018>, 2018

30 May 2018

3D CULTURAL HERITAGE DOCUMENTATION: A COMPARISON BETWEEN DIFFERENT PHOTOGRAHMETRIC SOFTWARE AND THEIR PRODUCTS

S. Gagliolo, E. Ausonio, B. Federici, I. Ferrando, D. Passoni, and D. Sguerso

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 347-354, <https://doi.org/10.5194/isprs-archives-XLII-2-347-2018>, 2018

30 May 2018

POSITION ACCURACY ANALYSIS OF A ROBUST VISION-BASED NAVIGATION

S. Gaglione, S. Del Pizzo, S. Troisi, and A. Angrisano

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 355-361, <https://doi.org/10.5194/isprs-archives-XLII-2-355-2018>, 2018

30 May 2018

POINT CLOUD AND DIGITAL SURFACE MODEL GENERATION FROM HIGH RESOLUTION MULTIPLE VIEW STEREO SATELLITE IMAGERY

K. Gong and D. Fritsch

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 363-370, <https://doi.org/10.5194/isprs-archives-XLII-2-363-2018>, 2018

30 May 2018

THE WINCKELMANN300 PROJECT: DISSEMINATION OF CULTURE WITH VIRTUAL REALITY AT THE CAPITOLINE MUSEUM IN ROME

S. Gonizzi Barsanti, S. G. Malatesta, F. Lella, B. Fanini, F. Sala, E. Dodero, and L. Petacco

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 371-378, <https://doi.org/10.5194/isprs-archives-XLII-2-371-2018>, 2018

30 May 2018

SINGLE-SHOT SEMANTIC MATCHER FOR UNSEEN OBJECT DETECTION

V. Gorbatsevich, Y. Vizilter, V. Knyaz, and A. Moiseenko

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 379-384, <https://doi.org/10.5194/isprs-archives-XLII-2-379-2018>, 2018

30 May 2018

SPHERICAL IMAGES FOR CULTURAL HERITAGE: SURVEY AND DOCUMENTATION WITH THE NIKON KM360

C. Gottardi and F. Guerra

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 385-390, <https://doi.org/10.5194/isprs-archives-XLII-2-385-2018>, 2018

30 May 2018

RAPID OBJECT DETECTION SYSTEMS, UTILISING DEEP LEARNING AND UNMANNED AERIAL SYSTEMS (UAS) FOR CIVIL ENGINEERING APPLICATIONS

D. Griffiths and J. Boehm

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 391-398, <https://doi.org/10.5194/isprs-archives-XLII-2-391-2018>, 2018

30 May 2018

FROM2D TO 3D SUPERVISED SEGMENTATION AND CLASSIFICATION FOR CULTURAL HERITAGE APPLICATIONS

E. Grilli, D. Dininno, G. Petrucci, and F. Remondino

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 399-406, <https://doi.org/10.5194/isprs-archives-XLII-2-399-2018>, 2018

30 May 2018

DETERMINING GEOMETRIC PARAMETERS OF AGRICULTURAL TREES FROM LASER SCANNING DATA OBTAINED WITH UNMANNED AERIAL VEHICLE

E. Hadas, G. Jozkow, A. Walicka, and A. Borkowski

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 407-410, <https://doi.org/10.5194/isprs-archives-XLII-2-407-2018>, 2018

30 May 2018

VARIABILITY OF REMOTE SENSING SPECTRAL INDICES IN BOREAL LAKE BASINS

T. Hakala, I. Pöölön, E. Honkavaara, R. Näsi, T. Hakala, and A. Lindfors

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 411-417, <https://doi.org/10.5194/isprs-archives-XLII-2-411-2018>, 2018

30 May 2018

SEMANTIC SEGMENTATION AND UNREGISTERED BUILDING DETECTION FROM UAV IMAGES USING A DECONVOLUTIONAL NETWORK

S. Ham, Y. Oh, K. Choi, and I. Lee

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 419-424, <https://doi.org/10.5194/isprs-archives-XLII-2-419-2018>, 2018

30 May 2018

EVALUATION OF A TRAFFIC SIGN DETECTOR BY SYNTHETIC IMAGE DATA FOR ADVANCED DRIVER ASSISTANCE SYSTEMS

A. Hanel, D. Kreuzpaintner, and U. Stilla

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 425-432, <https://doi.org/10.5194/isprs-archives-XLII-2-425-2018>, 2018

30 May 2018

METRIC SCALE CALCULATION FOR VISUAL MAPPING ALGORITHMS

A. Hanel, A. Mitschke, R. Boerner, D. Van Opdenbosch, L. Hoegner, D. Brodie, and U. Stilla

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 433-440, <https://doi.org/10.5194/isprs-archives-XLII-2-433-2018>, 2018

30 May 2018

PROTOTYPIC DEVELOPMENT AND EVALUATION OF A MEDIUM FORMAT METRIC CAMERA

H. Hastedt, R. Rofalski, T. Luhmann, R. Rosenbauer, D. Ochsner, and D. Rieke-Zapp

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 441-448, <https://doi.org/10.5194/isprs-archives-XLII-2-441-2018>, 2018

30 May 2018

RECONSTRUCTION OF 3D MODELS FROM POINT CLOUDS WITH HYBRID REPRESENTATION

P. Hu, Z. Dong, P. Yuan, F. Liang, and B. Yang

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 449-454, <https://doi.org/10.5194/isprs-archives-XLII-2-449-2018>, 2018

30 May 2018

COMBINING INDEPENDENT VISUALIZATION AND TRACKING SYSTEMS FOR AUGMENTED REALITY

P. Hübner, M. Weinmann, M. Hillemann, B. Jutzi, and S. Wursthorn

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 455-462, <https://doi.org/10.5194/isprs-archives-XLII-2-455-2018>, 2018

30 May 2018

CLASSIFICATION OF STRAWBERRY FRUIT SHAPE BY MACHINE LEARNING

T. Ishikawa, A. Hayashi, S. Nagamatsu, Y. Kyutoku, I. Dan, T. Wada, K. Oku, Y. Saeki, T. Uto, T. Tanabata, S. Isobe, and N. Kochi

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 463-470, <https://doi.org/10.5194/isprs-archives-XLII-2-463-2018>, 2018

30 May 2018

A GUIDED REGISTRATION STRATEGY EMPLOYING VIRTUAL PLANES TO OVERCOME NON-STANDARD GEOMETRIES – USING THE EXAMPLE OF MOBILE MAPPING AND AERIAL OBlique IMAGERY

P. Jende, F. Nex, M. Gerke, and G. Vosselman

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 471-477, <https://doi.org/10.5194/isprs-archives-XLII-2-471-2018>, 2018

30 May 2018

ASTEROID (21) LUTETIA: SEMI-AUTOMATIC IMPACT CRATERS DETECTION AND CLASSIFICATION

M. Jenerowicz and M. Banaszkiewicz

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 479-486, <https://doi.org/10.5194/isprs-archives-XLII-2-479-2018>, 2018

30 May 2018

COMPARATIVE GEOMETRICAL ACCURACY INVESTIGATIONS OF HAND-HELD 3D SCANNING SYSTEMS – AN UPDATE

T. P. Kersten, M. Lindstaedt, and D. Starosta

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 487-494, <https://doi.org/10.5194/isprs-archives-XLII-2-487-2018>, 2018

30 May 2018

AUTOMATED MOSAICKING OF GEOSTATIONARY OCEAN COLOR IMAGER BY COMBINATION OF SPATIAL AND FREQUENCY MATCHING

H. G. Kim, J. H. Son, and T. Kim

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 495-499, <https://doi.org/10.5194/isprs-archives-XLII-2-495-2018>, 2018

30 May 2018

INCORRECT MATCH DETECTION METHOD FOR ARCTIC SEA-ICE RECONSTRUCTION USING UAV IMAGES

J.-I. Kim and H.-C. Kim

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 501-505, <https://doi.org/10.5194/isprs-archives-XLII-2-501-2018>, 2018

30 May 2018

MESH MODELLING OF 3D POINT CLOUD FROM UAV IMAGES BY POINT CLASSIFICATION AND GEOMETRIC CONSTRAINTS

S. Kim, H. G. Kim, and T. Kim

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 507-511, <https://doi.org/10.5194/isprs-archives-XLII-2-507-2018>, 2018

30 May 2018

DEEP LEARNING FOR LOWTEXTURED IMAGE MATCHING

V. V. Kniaz, V. V. Fedorenko, and N. A. Fomin

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 513-518, <https://doi.org/10.5194/isprs-archives-XLII-2-513-2018>, 2018

30 May 2018

THERMAL TEXTURE GENERATION AND 3D MODEL RECONSTRUCTION USING SFM AND GAN

V. V. Kniaz and V. A. Mizginov

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 519-524, <https://doi.org/10.5194/isprs-archives-XLII-2-519-2018>, 2018

30 May 2018

PHOTOGRAMMETRIC TECHNIQUES FOR PALEOANTHROPOLOGICAL OBJECTS PRESERVING AND STUDYING

V. A. Knyaz, N. A. Leybova, R. Galeev, M. Novikov, and A. V. Gaboutchian

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 525-530, <https://doi.org/10.5194/isprs-archives-XLII-2-525-2018>, 2018

30 May 2018

EXPLOITING MIRRORS IN 3D RECONSTRUCTION OF SMALL ARTEFACTS

G. Kontogianni, A. T. Thomaidis, R. Chiliverou, and A. Georgopoulos

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 531-537, <https://doi.org/10.5194/isprs-archives-XLII-2-531-2018>, 2018

30 May 2018

WATCHING GRASS GROW- A PILOT STUDY ON THE SUITABILITY OF PHOTOGRAMMETRIC TECHNIQUES FOR QUANTIFYING CHANGE IN ABOVEGROUND BIOMASS IN GRASSLAND EXPERIMENTS

M. Kröhner, R. Anderson, J. Bumberger, P. Dietrich, W. S. Harpole, and H.-G. Maas

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 539-542, <https://doi.org/10.5194/isprs-archives-XLII-2-539-2018>, 2018

30 May 2018

VERSATILE MOBILE AND STATIONARY LOW-COST APPROACHES FOR HYDROLOGICAL MEASUREMENTS

M. Kröhner and A. Eltner

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 543-550, <https://doi.org/10.5194/isprs-archives-XLII-2-543-2018>, 2018

30 May 2018

COMPARISON OF POINT CLOUD REGISTRATION ALGORITHMS FOR BETTER RESULT ASSESSMENT – TOWARDS AN OPEN-SOURCE SOLUTION

E. Lachat, T. Landes, and P. Grussenmeyer

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 551-558, <https://doi.org/10.5194/isprs-archives-XLII-2-551-2018>, 2018

30 May 2018

EVALUATION OF GMSH MESHING ALGORITHMS IN PREPARATION OF HIGH-RESOLUTION WIND SPEED SIMULATIONS IN URBAN AREAS

M. Langheinrich

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 559-564, <https://doi.org/10.5194/isprs-archives-XLII-2-559-2018>, 2018

30 May 2018

CHANGE DETECTION IN REMOTE SENSING IMAGES USING CONDITIONAL ADVERSARIAL NETWORKS

M. A. Lebedev, Y. V. Vizilter, O. V. Vygolov, V. A. Knyaz, and A. Y. Rubis

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 565-571, <https://doi.org/10.5194/isprs-archives-XLII-2-565-2018>, 2018

30 May 2018

OBJECT DETECTION FROM MMS IMAGERY USING DEEP LEARNING FOR GENERATION OF ROAD ORTHOPHOTOS

Y. Li, M. Sakamoto, T. Shinohara, and T. Satoh

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 573-577, <https://doi.org/10.5194/isprs-archives-XLII-2-573-2018>, 2018

30 May 2018

VERTICAL ACCURACY EVALUATION OF ASTER GDEM2 OVER A MOUNTAINOUS AREA BASED ON UAV PHOTOGRAMMETRY

Y. Liang, Y. Qu, D. Guo, and T. Cui

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 579-584, <https://doi.org/10.5194/isprs-archives-XLII-2-579-2018>, 2018

30 May 2018

THEMATIC TEXTURE SELECTION AND CORRECTION FOR BUILDING FAÇADE INSPECTION BASED ON THERMAL RADIANT CHARACTERISTICS

D. Lin, M. Jarzabek-Rychard, D. Schneider, and H.-G. Maas

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 585-591, <https://doi.org/10.5194/isprs-archives-XLII-2-585-2018>, 2018

30 May 2018

EVALUATION OF DEEP LEARNING BASED STEREO MATCHING METHODS: FROM GROUND TO AERIAL IMAGES

J. Liu, S. Ji, C. Zhang, and Z. Qin

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 593-597, <https://doi.org/10.5194/isprs-archives-XLII-2-593-2018>, 2018

30 May 2018

3D MODELLING OF A HISTORICAL BUILDING USING CLOSE-RANGE PHOTOGRAHAMTRY AND REMOTELY PILOTED AIRCRAFT SYSTEM (RPAS)

M. Lo Brutto, D. Ebolese, and G. Dardanelli

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 599-606, <https://doi.org/10.5194/isprs-archives-XLII-2-599-2018>, 2018

30 May 2018

OPEN SOURCE CLOUD-BASED TECHNOLOGIES FOR BIM

S. Logothetis, E. Karachaliou, E. Valari, and E. Stylianidis

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 607-614, <https://doi.org/10.5194/isprs-archives-XLII-2-607-2018>, 2018

30 May 2018

RESEARCH ON HISTORIC BIM OF BUILT HERITAGE IN TAIWAN – A CASE STUDY OF HUANGXI ACADEMY

Y. C. Lu, T. Y. Shih, and Y. N. Yen

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 615-622, <https://doi.org/10.5194/isprs-archives-XLII-2-615-2018>, 2018

30 May 2018

INVESTIGATIONS ON THE BUNDLE ADJUSTMENT RESULTS FROM SFM-BASED SOFTWARE FOR MAPPING PURPOSES

Y. A. Lumban-Gaol, A. Murtyoso, and B. H. Nugroho

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 623-628, <https://doi.org/10.5194/isprs-archives-XLII-2-623-2018>, 2018

30 May 2018

RESEARCH ON THE DIGITAL SIMULATION FOR THE WHOLE PROCESS OF MARS EXPLORATION

L. Lyu, Q. Xu, Y. Zhou, S. Xing, W. Lu, and Y. Zhao

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 629-635, <https://doi.org/10.5194/isprs-archives-XLII-2-629-2018>, 2018

30 May 2018

INVESTIGATION OF GEOMETRIC PERFORMANCE OF AN INDOOR MOBILE MAPPING SYSTEM

M. Maboudi, D. Bánádi, and M. Gerke

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 637-642, <https://doi.org/10.5194/isprs-archives-XLII-2-637-2018>, 2018

30 May 2018

FEATURE MATCHING OF HISTORICAL IMAGES BASED ON GEOMETRY OF QUADRILATERALS

F. Maiwald, D. Schneider, F. Henze, S. Münster, and F. Niebling

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 643-650, <https://doi.org/10.5194/isprs-archives-XLII-2-643-2018>, 2018

30 May 2018

MULTI-TEMPORAL CLASSIFICATION AND CHANGE DETECTION USING UAV IMAGES

S. Makuti, F. Nex, and M. Y. Yang

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 651-658, <https://doi.org/10.5194/isprs-archives-XLII-2-651-2018>, 2018

30 May 2018

A CASE STUDY ON THROUGH-WATER DENSE IMAGE MATCHING

G. Mandburger

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 659-666, <https://doi.org/10.5194/isprs-archives-XLII-2-659-2018>, 2018

30 May 2018

INVESTIGATION INTO THE USE OF ACTION CAMERAS IN THE DOCUMENTATION OF ARCHITECTURAL DETAILS – THE CASE STUDY OF A BAROQUE CHAMBER

J. Markiewicz, S. Łapiński, M. Pilarska, R. Bierkowski, and A. Kaliszewska

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 667-674, <https://doi.org/10.5194/isprs-archives-XLII-2-667-2018>, 2018

30 May 2018

THE MULTITEMPORAL PHOTOGRAHAMMETRIC DATA IN ARCHAEOLOGICAL AND ARCHITECTURAL RESEARCH IN THE ROYAL CASTLE IN WARSAW – FIRST RESULTS

J. Markiewicz, D. Zawieska, A. Bocheńska, A. Tobiasz, and S. Łapiński

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 675-681, <https://doi.org/10.5194/isprs-archives-XLII-2-675-2018>, 2018

30 May 2018

INDOOR PHOTOGRAHAMMETRY AIDED WITH UWB NAVIGATION

A. Masiero, F. Fissore, A. Guarneri, and A. Vettore

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 683-690, <https://doi.org/10.5194/isprs-archives-XLII-2-683-2018>, 2018

30 May 2018

MULTITEMPORAL ANALYSIS OF OBJECTS IN 3D POINT CLOUDS FOR LANDSLIDE MONITORING

A. Mayr, M. Rutzinger, and C. Geitner

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 691-697, <https://doi.org/10.5194/isprs-archives-XLII-2-691-2018>, 2018

30 May 2018

IMPROVING UNDERWATER ACCURACY BY EMPIRICAL WEIGHTING OF IMAGE OBSERVATIONS

F. Menna, E. Nocerino, P. Drap, F. Remondino, A. Murtyoso, P. Grussenmeyer, and N. Börlin

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 699-705, <https://doi.org/10.5194/isprs-archives-XLII-2-699-2018>, 2018

30 May 2018

ETALON IMAGES: UNDERSTANDING THE CONVOLUTION NEURAL NETWORKS

V. V. Molchanov, B. V. Vishnyakov, V. S. Gorbatsevich, and Y. V. Vizilter

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 707-714, <https://doi.org/10.5194/isprs-archives-XLII-2-707-2018>, 2018

30 May 2018

HBIM METHODOLOGY AS A BRIDGE BETWEEN ITALY AND ARGENTINA

A. Moreira, R. Quattrini, G. Maggiolo, and R. Mammoli

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 715-722, <https://doi.org/10.5194/isprs-archives-XLII-2-715-2018>, 2018

30 May 2018

HABANAPP: HAVANA'S ARCHITECTURAL HERITAGE A CLICK AWAY

C. Morganti and C. Bartolomei

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 723-730, <https://doi.org/10.5194/isprs-archives-XLII-2-723-2018>, 2018

30 May 2018

CLASSIFICATION OF POLE-LIKE OBJECTS USING POINT CLOUDS AND IMAGES CAPTURED BY MOBILE MAPPING SYSTEMS

Y. Mori, K. Kohira, and H. Masuda

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 731-738, <https://doi.org/10.5194/isprs-archives-XLII-2-731-2018>, 2018

30 May 2018

SUBAQUATIC DIGITAL ELEVATION MODELS FROM UAV-IMAGERY

C. Muisow, R. Kenner, Y. Bühler, A. Stoffel, and H.-G. Maas

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 739-744, <https://doi.org/10.5194/isprs-archives-XLII-2-739-2018>, 2018

30 May 2018

COMPARISON AND ASSESSMENT OF 3D REGISTRATION AND GOREFERENCING APPROACHES OF POINT CLOUDS IN THE CASE OF EXTERIOR AND INTERIOR HERITAGE BUILDING RECORDING

A. Murtyoso and P. Grussenmeyer

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 745-751, <https://doi.org/10.5194/isprs-archives-XLII-2-745-2018>, 2018

30 May 2018

ON A FUNDAMENTAL EVALUATION OF A UAV EQUIPPED WITH A MULTICHANNEL LASER SCANNER

K. Nakano, H. Suzuki, K. Omori, K. Hayakawa, and M. Kurodai

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 753-758, <https://doi.org/10.5194/isprs-archives-XLII-2-753-2018>, 2018

30 May 2018

MONITORING CORAL GROWTH – THE DICHOTOMY BETWEEN UNDERWATER PHOTOGRAMMETRY AND GEODETIC CONTROL NETWORK

F. Neyer, E. Nocerino, and A. Gruen

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 759-766, <https://doi.org/10.5194/isprs-archives-XLII-2-759-2018>, 2018

30 May 2018

AUTOMATIC RAIL EXTRACTION AND CELARANCE CHECK WITH A POINT CLOUD CAPTURED BY MLS IN A RAILWAY

Y. Niina, R. Honma, Y. Honma, K. Kondo, K. Tsuji, T. Hiramatsu, and E. Oketani

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 767-771, <https://doi.org/10.5194/isprs-archives-XLII-2-767-2018>, 2018

30 May 2018

MAPPING VIS AND UVL IMAGERY ON 3D GEOMETRY FOR NON-INVASIVE, NON-CONTACT ANALYSIS OF A VASE

E. Nocerino, D. H. Rieke-Zapp, E. Trinkl, R. Rosenbauer, E. M. Farella, D. Morabito, and F. Remondino

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 773-780, <https://doi.org/10.5194/isprs-archives-XLII-2-773-2018>, 2018

30 May 2018

FIRST STEPS TO AUTOMATED INTERIOR RECONSTRUCTION FROM SEMANTICALLY ENRICHED POINT CLOUDS AND IMAGERY

L. S. Obrock and E. Gülcü

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 781-787, <https://doi.org/10.5194/isprs-archives-XLII-2-781-2018>, 2018

30 May 2018

REAL-TIME AND POST-PROCESSED GEOREFERENCING FOR HYPERPSPECTRAL DRONE REMOTE SENSING

R. A. Oliveira, E. Khoramshahi, J. Suomalainen, T. Hakala, N. Viljanen, and E. Honkavaara

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 789-795, <https://doi.org/10.5194/isprs-archives-XLII-2-789-2018>, 2018

30 May 2018

ANALYSIS OF 3D BUILDING MODELS ACCURACY BASED ON THE AIRBORNE LASER SCANNING POINT CLOUDS

W. Ostrowski, M. Pilarska, J. Charyton, and K. Bakula

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 797-804, <https://doi.org/10.5194/isprs-archives-XLII-2-797-2018>, 2018

30 May 2018

STOCHASTIC SURFACE MESH RECONSTRUCTION

M. Ozendi, D. Akca, and H. Topan

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 805-812, <https://doi.org/10.5194/isprs-archives-XLII-2-805-2018>, 2018

30 May 2018

USE OF FISHEYE PARROT BEBOP 2 IMAGES FOR 3D MODELLING USING COMMERCIAL PHOTOGAMMETRIC SOFTWARE

D. Pagliari and L. Pinto

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 813-820, <https://doi.org/10.5194/isprs-archives-XLII-2-813-2018>, 2018

30 May 2018

INTEGRATED PHOTOGAMMETRIC SURVEY AND BIM MODELLING FOR THE PROTECTION OF SCHOOL HERITAGE, APPLICATIONS ON A CASE STUDY

C. Palestini, A. Basso, and L. Graziani

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 821-828, <https://doi.org/10.5194/isprs-archives-XLII-2-821-2018>, 2018

30 May 2018

DEEP LEARNING AND IMAGE PROCESSING FOR AUTOMATED CRACK DETECTION AND DEFECT MEASUREMENT IN UNDERGROUND STRUCTURES

F. Panella, J. Boehm, Y. Loo, A. Kaushik, and D. Gonzalez

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 829-835, <https://doi.org/10.5194/isprs-archives-XLII-2-829-2018>, 2018

30 May 2018

THE ESTIMATION OF PRECISIONS IN THE PLANNING OF UAS PHOTOGAMMETRIC SURVEYS

D. Passoni, B. Federici, I. Ferrando, S. Gagliolo, and D. Sguero

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 837-843, <https://doi.org/10.5194/isprs-archives-XLII-2-837-2018>, 2018

30 May 2018

A COMPARISON OF TWO STRATEGIES FOR AVOIDING NEGATIVE TRANSFER IN DOMAIN ADAPTATION BASED ON LOGISTIC REGRESSION

A. Paul, K. Vogt, F. Rottensteiner, J. Ostermann, and C. Heipke

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 845-852, <https://doi.org/10.5194/isprs-archives-XLII-2-845-2018>, 2018

30 May 2018

QUASI-ORTHORECTIFIED PROJECTION FOR THE MEASUREMENT OF RED GORGONIAN COLONIES

G. Pavoni, M. Palma, M. Callieri, M. Dellepiane, C. Cerrano, U. Pantaleo, and R. Scopigno

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 853-860, <https://doi.org/10.5194/isprs-archives-XLII-2-853-2018>, 2018

30 May 2018

APPLICATIONS OF ACTION CAM SENSORS IN THE ARCHAEOLOGICAL YARD

M. Pepe, S. Ackermann, L. Fregonese, F. Fassi, and A. Adami

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 861-867, <https://doi.org/10.5194/isprs-archives-XLII-2-861-2018>, 2018

30 May 2018

ARCHAEOLOGICAL FEATURE DETECTION FROM ARCHIVE AERIAL PHOTOGRAPHY WITH A SFM-MVS AND IMAGE ENHANCEMENT PIPELINE

M. V. Peppa, J. P. Mills, K. D. Fieber, I. Haynes, S. Turner, A. Turner, M. Douglas, and P. G. Bryan

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 869-875, <https://doi.org/10.5194/isprs-archives-XLII-2-869-2018>, 2018

30 May 2018

FISHEYE MULTI-CAMERA SYSTEM CALIBRATION FOR SURVEYING NARROW AND COMPLEX ARCHITECTURES

L. Perfetti, C. Polari, and F. Fassi

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 877-883, <https://doi.org/10.5194/isprs-archives-XLII-2-877-2018>, 2018

30 May 2018

DIVERS-OPERATED UNDERWATER PHOTOGAMMETRY: APPLICATIONS IN THE STUDY OF ANTARCTIC BENTHOS

P. Piazza, V. Cummings, D. Lohrer, S. Marini, P. Marriott, F. Menna, E. Nocerino, A. Peirano, and S. Schiaparelli

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 885-892, <https://doi.org/10.5194/isprs-archives-XLII-2-885-2018>, 2018

30 May 2018

DEEP CONVOLUTIONAL NEURAL NETWORK FOR AUTOMATIC DETECTION OF DAMAGED PHOTOVOLTAIC CELLS

R. Pierdicca, E. S. Malinverni, F. Piccinini, M. Paolanti, A. Felicetti, and P. Zingaretti

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 893-900, <https://doi.org/10.5194/isprs-archives-XLII-2-893-2018>, 2018

30 May 2018

CLASSIFICATION OF DUAL-WAVELENGTH AIRBORNE LASER SCANNING POINT CLOUD BASED ON THE RADIOMETRIC PROPERTIES OF THE OBJECTS

M. Pilarska

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 901-907, <https://doi.org/10.5194/isprs-archives-XLII-2-901-2018>, 2018

30 May 2018

BUILDING INFORMATION MODELS FOR MONITORING AND SIMULATION DATA IN HERITAGE BUILDINGS

D. P. Pocabelli, J. Boehm, P. Bryan, J. Still, and J. Grau-Bové

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 909-916, <https://doi.org/10.5194/isprs-archives-XLII-2-909-2018>, 2018

30 May 2018

REPRESENTING ROAD RELATED LASERSCANNED DATA IN CURVED REGULAR GRID: A SUPPORT TO AUTONOMOUS VEHICLES

V. Potó, A. Csepinszky, and Á. Barsi

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 917-921, <https://doi.org/10.5194/isprs-archives-XLII-2-917-2018>, 2018

30 May 2018

MONITORING OF PROGRESSIVE DAMAGE IN BUILDINGS USING LASER SCAN DATA

I. Puente, R. Lindenbergh, A. Van Natijne, R. Esposito, and R. Schipper
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 923-929, <https://doi.org/10.5194/isprs-archives-XLII-2-923-2018>, 2018

30 May 2018

EFFECT OF THE TRAINING SET CONFIGURATION ON SENTINEL-2-BASED URBAN LOCAL CLIMATE ZONE CLASSIFICATION

C. P. Qiu, M. Schmitt, P. Ghamsi, and X. X. Zhu
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 931-936, <https://doi.org/10.5194/isprs-archives-XLII-2-931-2018>, 2018

30 May 2018

HBM TO VR. SEMANTIC AWARENESS AND DATA ENRICHMENT INTEROPERABILITY FOR PARAMETRIC LIBRARIES OF HISTORICAL ARCHITECTURE

R. Quattrini, C. Battini, and R. Mammoli
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 937-943, <https://doi.org/10.5194/isprs-archives-XLII-2-937-2018>, 2018

30 May 2018

OPTO-TECHNICAL MONITORING – A STANDARDIZED METHODOLOGY TO ASSESS THE TREATMENT OF HISTORICAL STONE SURFACES

M. Rahrig, R. Drewello, and A. Lazzeri
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 945-952, <https://doi.org/10.5194/isprs-archives-XLII-2-945-2018>, 2018

30 May 2018

LOW-COST 3D DEVICES AND LASER SCANNERS COMPARISON FOR THE APPLICATION IN ORTHOPEDIC CENTRES

D. F. Redaelli, S. Gonzi Barsanti, P. Fraschini, E. Biffi, and G. Colombo
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 953-960, <https://doi.org/10.5194/isprs-archives-XLII-2-953-2018>, 2018

30 May 2018

NUMERICAL SIMULATION AND EXPERIMENTAL VALIDATION OF WAVE PATTERN INDUCED COORDINATE ERRORS IN AIRBORNE LIDAR BATHYMETRY

K. Richter, D. Mader, P. Westfeld, and H.-G. Maas
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 961-967, <https://doi.org/10.5194/isprs-archives-XLII-2-961-2018>, 2018

30 May 2018

AUTOMATED CALIBRATION OF FEM MODELS USING LIDAR POINT CLOUDS

B. Riveiro, G. Cubreiro, B. Conde, M. Cabaleiro, R. Lindenbergh, M. Soilán, and J. C. Caamaño
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 969-974, <https://doi.org/10.5194/isprs-archives-XLII-2-969-2018>, 2018

30 May 2018

DIACHRONIC RECONSTRUCTION OF LOST CULTURAL HERITAGE SITES. STUDY CASE OF THE MEDIEVAL WALL OF AVILA (SPAIN)

P. Rodríguez-Gonzálvez, S. Cardozo Mamani, A. Guerra Campo, L. J. Sánchez-Aparicio, S. del Pozo, A. Muñoz-Nieto, and D. González-Aguilera
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 975-981, <https://doi.org/10.5194/isprs-archives-XLII-2-975-2018>, 2018

30 May 2018

DTM GENERATION THROUGH UAV SURVEY WITH A FISHEYE CAMERA ON A VINEYARD

G. Ronchetti, D. Pagliari, and G. Sona
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 983-989, <https://doi.org/10.5194/isprs-archives-XLII-2-983-2018>, 2018

30 May 2018

COMPARISON BETWEEN RGB AND RGB-D CAMERAS FOR SUPPORTING LOW-COST GNSS URBAN NAVIGATION

L. Rossi, C. I. De Gaetani, D. Pagliari, E. Realini, M. Reguzzoni, and L. Pinto
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 991-998, <https://doi.org/10.5194/isprs-archives-XLII-2-991-2018>, 2018

30 May 2018

EXTENDED MULTISCALE IMAGE SEGMENTATION FOR CASTELLATED WALL MANAGEMENT

M. Sakamoto, M. Tsuguchi, S. Chhatkuli, and T. Satoh
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 999-1005, <https://doi.org/10.5194/isprs-archives-XLII-2-999-2018>, 2018

30 May 2018

REVERSE INFORMATION MODELING FOR HISTORIC ARTEFACTS: TOWARDS THE DEFINITION OF A LEVEL OF ACCURACY FOR RUINED HERITAGE

C. Santagati, M. Lo Turco, and R. Garozzo
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1007-1014, <https://doi.org/10.5194/isprs-archives-XLII-2-1007-2018>, 2018

30 May 2018

ANALYSIS OF LOW-LIGHT AND NIGHT-TIME STEREO-PAIR IMAGES FOR PHOTOGRAMMETRIC RECONSTRUCTION

M. Santise, K. Thoeni, R. Roncella, F. Diotri, and A. Giacomin
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1015-1022, <https://doi.org/10.5194/isprs-archives-XLII-2-1015-2018>, 2018

30 May 2018

ACQUISITION OF GEOMETRICAL DATA OF SMALL RIVERS WITH AN UNMANNED WATER VEHICLE

H. Sardemann, A. Eltner, and H.-G. Maas
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1023-1027, <https://doi.org/10.5194/isprs-archives-XLII-2-1023-2018>, 2018

30 May 2018

TECHNICAL ASPECTS RELATED TO THE APPLICATION OF SFM PHOTOGRAMMETRY IN HIGH MOUNTAIN

M. Scaiioni, J. Crippa, M. Corti, L. Barazzetti, D. Fugazza, R. Azzoni, M. Cernuschi, and G. A. Diolaiti
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1029-1036, <https://doi.org/10.5194/isprs-archives-XLII-2-1029-2018>, 2018

30 May 2018

INTEGRATED SURVEY PROCEDURES FOR THE VIRTUAL READING AND FRUITION OF HISTORICAL BUILDINGS

S. Scandurra, M. Pulcrano, V. Cirillo, M. Campi, A. di Lugo, and O. Zerlenga
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1037-1044, <https://doi.org/10.5194/isprs-archives-XLII-2-1037-2018>, 2018

30 May 2018

COLORIZING SENTINEL-1 SAR IMAGES USING A VARIATIONAL AUTOENCODER CONDITIONED ON SENTINEL-2 IMAGERY

M. Schmitt, L. H. Hughes, M. Körner, and X. X. Zhu
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1045-1051, <https://doi.org/10.5194/isprs-archives-XLII-2-1045-2018>, 2018

30 May 2018

3D VIRTUAL CH INTERACTIVE INFORMATION SYSTEMS FOR A SMART WEB BROWSING EXPERIENCE FOR DESKTOP PCS AND MOBILE DEVICES

A. Scianna and M. La Guardia
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1053-1059, <https://doi.org/10.5194/isprs-archives-XLII-2-1053-2018>, 2018

30 May 2018

3D COMPARISON TOWARDS A COMPREHENSIVE ANALYSIS OF A BUILDING IN CULTURAL HERITAGE

I. Selvaggi, M. Dellapasqua, F. Franci, A. Spangher, D. Visintini, and G. Bitelli
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1061-1066, <https://doi.org/10.5194/isprs-archives-XLII-2-1061-2018>, 2018

30 May 2018

APPLICATION OF MLS DATA TO THE ASSESSMENT OF SAFETY-RELATED FEATURES IN THE SURROUNDING AREA OF AUTOMATICALLY DETECTED PEDESTRIAN CROSSINGS

M. Soilán, B. Riveiro, A. Sánchez-Rodríguez, and L. M. González-deSantos
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1067-1074, <https://doi.org/10.5194/isprs-archives-XLII-2-1067-2018>, 2018

30 May 2018

INTEGRATED IMAGING APPROACHES SUPPORTING THE EXCAVATION ACTIVITIES. MULTI-SCALE GEOSPATIAL DOCUMENTATION IN HIERAPOLIS (TK)

A. Spanò, F. Chiabrando, G. Sammartano, and L. Teppati Losè
 Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1075-1082, <https://doi.org/10.5194/isprs-archives-XLII-2-1075-2018>, 2018

30 May 2018

MULTIPLE TLS POINT CLOUD REGISTRATION BASED ON POINT PROJECTION IMAGES

T. Sumi, H. Date, and S. Kanai

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1083-1090, <https://doi.org/10.5194/isprs-archives-XLII-2-1083-2018>, 2018

30 May 2018

FOREST COVER CLASSIFICATION USING GEOSPATIAL MULTIMODAL DATA

K. Suzuki, U. Rin, Y. Maeda, and H. Takeda

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1091-1096, <https://doi.org/10.5194/isprs-archives-XLII-2-1091-2018>, 2018

30 May 2018

3DNOW: IMAGE-BASED 3D RECONSTRUCTION AND MODELING VIA WEB

Y. Tefera, F. Poiesi, D. Morabito, F. Remondino, E. Nocerino, and P. Chippendale

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1097-1103, <https://doi.org/10.5194/isprs-archives-XLII-2-1097-2018>, 2018

30 May 2018

GEOMATIC ARCHAEOLOGICAL RECONSTRUCTION AND A HYBRID VIEWER FOR THE ARCHAEOLOGICAL SITE OF CÁPARRA (SPAIN)

C. Tejeda-Sánchez, A. Muñoz-Nieto, and P. Rodríguez-González

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1105-1111, <https://doi.org/10.5194/isprs-archives-XLII-2-1105-2018>, 2018

30 May 2018

PRELIMINARY EVALUATION OF A COMMERCIAL 360 MULTI-CAMERA RIG FOR PHOTGRAMMETRIC PURPOSES

L. Teppati Losè, F. Chiabrando, and A. Spanò

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1113-1120, <https://doi.org/10.5194/isprs-archives-XLII-2-1113-2018>, 2018

30 May 2018

INTEGRATION OF THREE-DIMENSIONAL DIGITAL MODELS AND 3D GIS: THE DOCUMENTATION OF THE MEDIEVAL BURIALS OF AMITERNUM (L'AQUILA, ITALY)

I. Trizio, F. Savini, and A. Giannangeli

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1121-1128, <https://doi.org/10.5194/isprs-archives-XLII-2-1121-2018>, 2018

30 May 2018

GIS-HBIM INTEGRATION FOR THE MANAGEMENT OF HISTORICAL BUILDINGS

G. Vacca, E. Quaquero, D. Pili, and M. Brandolini

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1129-1135, <https://doi.org/10.5194/isprs-archives-XLII-2-1129-2018>, 2018

30 May 2018

MASSIVE LINKING OF PS-INSAR DEFORMATIONS TO A NATIONAL AIRBORNE LASER POINT CLOUD

A. L. van Natijne, R. C. Lindenbergh, and R. F. Hanssen

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1137-1144, <https://doi.org/10.5194/isprs-archives-XLII-2-1137-2018>, 2018

30 May 2018

OPEN PIT MINE 3D MAPPING BY TLS AND DIGITAL PHOTOGAMMOMETRY: 3D MODEL UPDATE THANKS TO A SLAM BASED APPROACH

G. Vassena and A. Clerici

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1145-1148, <https://doi.org/10.5194/isprs-archives-XLII-2-1145-2018>, 2018

30 May 2018

FOCUSING ON OUT-OF-FOCUS: ASSESSING DEFOCUS ESTIMATION ALGORITHMS FOR THE BENEFIT OF AUTOMATED IMAGE MASKING

G. J. Verhoeven

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1149-1156, <https://doi.org/10.5194/isprs-archives-XLII-2-1149-2018>, 2018

30 May 2018

INDIVIDUAL ROCKS SEGMENTATION IN TERRESTRIAL LASER SCANNING POINT CLOUD USING ITERATIVE DBSCAN ALGORITHM

A. Walicka, G. Józków, and A. Borkowski

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1157-1161, <https://doi.org/10.5194/isprs-archives-XLII-2-1157-2018>, 2018

30 May 2018

VALIDATING A WORKFLOW FOR TREE INVENTORY UPDATING WITH 3D POINT CLOUDS OBTAINED BY MOBILE LASER SCANNING

J. Wang and R. Lindenbergh

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1163-1168, <https://doi.org/10.5194/isprs-archives-XLII-2-1163-2018>, 2018

30 May 2018

SPACE-BORNE LASER ALTIMETER GEOLOCATION ERROR ANALYSIS

Y. Wang, J. Fang, and Y. Ai

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1169-1174, <https://doi.org/10.5194/isprs-archives-XLII-2-1169-2018>, 2018

30 May 2018

TRAJECTORY BASED 3D FRAGMENT TRACKING IN HYPERVELOCITY IMPACT EXPERIMENTS

E. Watson, H.-G. Maas, F. Schäfer, and S. Hiermaier

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1175-1181, <https://doi.org/10.5194/isprs-archives-XLII-2-1175-2018>, 2018

30 May 2018

SPECTRAL AND 3D CULTURAL HERITAGE DOCUMENTATION USING A MODIFIED CAMERA

E. K. Webb, S. Robson, L. MacDonald, D. Garside, and R. Evans

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1183-1190, <https://doi.org/10.5194/isprs-archives-XLII-2-1183-2018>, 2018

30 May 2018

ROOFN3D: DEEP LEARNING TRAINING DATA FOR 3D BUILDING RECONSTRUCTION

A. Wichmann, A. Agoub, and M. Kada

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1191-1198, <https://doi.org/10.5194/isprs-archives-XLII-2-1191-2018>, 2018

30 May 2018

EXTRACTION OF BUILDING ROOF EDGES FROM LIDAR DATA TO OPTIMIZE THE DIGITAL SURFACE MODEL FOR TRUE ORTHOPHOTO GENERATION

E. Widyaningrum, R. C. Lindenbergh, B. G. H. Gorte, and K. Zhou

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1199-1205, <https://doi.org/10.5194/isprs-archives-XLII-2-1199-2018>, 2018

30 May 2018

PLANE-BASED REGISTRATION OF SEVERAL THOUSAND LASER SCANS ON STANDARD HARDWARE

D. Wujanz, S. Schaller, F. Giedsorf, and L. Gründig

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1207-1212, <https://doi.org/10.5194/isprs-archives-XLII-2-1207-2018>, 2018

30 May 2018

MESH-TO-BIM: FROM SEGMENTED MESH ELEMENTS TO BIM MODEL WITH LIMITED PARAMETERS

X. Yang, M. Koehl, and P. Grussenmeyer

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1213-1218, <https://doi.org/10.5194/isprs-archives-XLII-2-1213-2018>, 2018

30 May 2018

DEVELOPMENT OF A SINGLE-VIEW ODOMETER BASED ON PHOTOGAMMETRIC BUNDLE ADJUSTMENT

S. J. Yoon, W. S. Yoon, J. W. Jung, and T. Kim

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1219-1223, <https://doi.org/10.5194/isprs-archives-XLII-2-1219-2018>, 2018

30 May 2018

CLASSIFICATION OF MOBILE LASER SCANNING POINT CLOUDS OF URBAN SCENES EXPLOITING CYLINDRICAL NEIGHBOURHOODS

M. Zheng, M. Lemmens, and P. van Oosterom

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1225-1228, <https://doi.org/10.5194/isprs-archives-XLII-2-1225-2018>, 2018

30 May 2018

3D BUILDING CHANGE DETECTION BETWEEN CURRENT VHR IMAGES AND PAST LIDAR DATA

K. Zhou, B. Gorte, R. Lindenbergh, and E. Widyaningrum

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1229-1235, <https://doi.org/10.5194/isprs-archives-XLII-2-1229-2018>, 2018

30 May 2018

GRAPHICS-IMAGE MIXED METHOD FOR LARGE-SCALE BUILDINGS RENDERING

Y. Zhou, Q. Xu, S. Xing, and X. Hu

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1237-1241, <https://doi.org/10.5194/isprs-archives-XLII-2-1237-2018>, 2018

30 May 2018

SENSOR- AND SCENE-GUIDED INTEGRATION OF TLS AND PHOTOGRAMMETRIC POINT CLOUDS FOR LANDSLIDE MONITORING

T. Zieher, I. Toschi, F. Remondino, M. Rutzinger, Ch. Kofler, A. Mejia-Aguilar, and R. Schlögel

Int. Arch. Photogramm. Remote Sens. Spatial Inf. Sci., XLII-2, 1243-1250, <https://doi.org/10.5194/isprs-archives-XLII-2-1243-2018>, 2018
